

# PROCEEDINGS OF THE FINAL CONFERENCE

## “Urban Heat Island and Heat Resilience: Networking for Future Strategy”

Thessaloniki, 19 May 2022

The project *Implementation of a forecAsting System for urban heaT Island effect for the development of urban adaptation strategies - LIFE ASTI* has received funding from the LIFE Programme of the European Union.

# Introduction

LIFE ASTI Final Conference “Implementation of a forecasting System for urban heat Island effect for the development of urban adaptation strategies” took place as a hybrid event on 19<sup>th</sup> of May 2022, at the City Hall of the Municipality of Thessaloniki.

During the Conference were presented the research data of the Urban Heat Island (UHI) identified in 3 European cities (Thessaloniki, Rome and Heraklion), the short-term forecast system warning residents and citizens of cities on the heat load during hot days, as well as proposals for the protection of the health of vulnerable groups in urban areas.

The Conference, organized by the Municipality of Thessaloniki, was attended by a total of more than 80 people (either live or streaming), including project partners from Greece and Italy, representatives of the State, Local and Regional Authorities, the Academic Community and organizations working on the crucial issue of Climate Change.

After brief addresses from local, regional and national authorities, followed the session “Life is 30! Celebrating 30 years of LIFE Programme” with brief presentations by the connected LIFE projects, that gave the opportunity to celebrate 30 years of LIFE Program, which counts 5,500 projects and 5 billion across Europe, exclusively for the environment and climate change.

The next session of Invited talks was devoted to dedicated presentations about climate change and its impacts from invited speakers. The session “Life Asti results” followed and LIFE ASTI partners presented an overview of the project and the main results on the UHI forecasting systems and the heat health warning systems for climate change adaptation. The final conference ended with the stakeholder’s session and the conclusions of the meeting.

The Final Workshop brought together stakeholders, LIFE projects, LIFE ASTI partners and the necessity of such collaboration was highlighted in order to provide services that improve difficulties that caused by UHI phenomenon in modern cities.

FINAL CONFERENCE

Celebrating 30 years of LIFE Programme

May 19, 2022

Municipality of Thessaloniki, Vas. Georgiou A 1, Municipal Council Hall

The conference will take place in hybrid format:

- Those who wish to attend the conference online can do so from the following link: <https://ever.webex.com/jever/j.php?MTD=mk6#27831ad1594e0cbe3b0eaf4e1d4f> (Meeting number: 2550 544 2110, Password: MDhy5p2cDX5)
- Those that wish to attend the events in person must know that all the protocols regarding the covid-19 pandemic that are in effect at the day of the events, will be followed.

## AGENDA

09:00 – 09:15	Registrations – Welcome coffee * Registrations can also be made electronically, before the date of the events, at the following link: <a href="#">registration form</a>
09:15 – 09:30	Press Conference – Welcome addresses <ul style="list-style-type: none"> <li>Mr. Konstantinos Zervas, Mayor of Thessaloniki</li> <li>Mr. Mihail Koupkas, Deputy Mayor in Finance, Chief Residence Officer of the Municipality of Thessaloniki</li> <li>Prof. Dimitrios Melas, Aristotle University of Thessaloniki</li> </ul>
09:30-10:30	LIFE is 30! Celebrating 30 years of LIFE Programme <ul style="list-style-type: none"> <li>Mr. Bernd Decker, Senior Project Adviser LIFE Climate Action</li> <li>LIFE ASTI animation video #LIFEis30</li> <li>Brief presentations by the connected LIFE projects               <ul style="list-style-type: none"> <li>Project "HEATLAND", Mr. V. # Project contribution to NAS implementation

## Catalyse the implementation of the 1<sup>st</sup> adaptation policy cycle (2016-2026)

- Improve the availability of climate projections and data
- Build capacity to prioritise and implement adaptation measures
- Develop local plans for CCA
- Provide replicable “good practice” examples of concrete adaptation projects to promote action in major vulnerable sectors
- Monitor and evaluate NAS and RAAPs implementation
- Strengthen adapting capacity of stakeholders and the general public through dedicated awareness raising
- Pool and coordinate funding for adaptation implementation (2014-2020, 2021-2027)

## Prepare the passage to the 2<sup>nd</sup> adaptation policy cycle (2026+)

- Update of the CCIV BoG report
- Review and revise the NAS
- Make recommendations for the RAAPs review and revision
- Identify adaptation priorities for post-2028+ programming period

**LIFE-IP AdaptInGR**

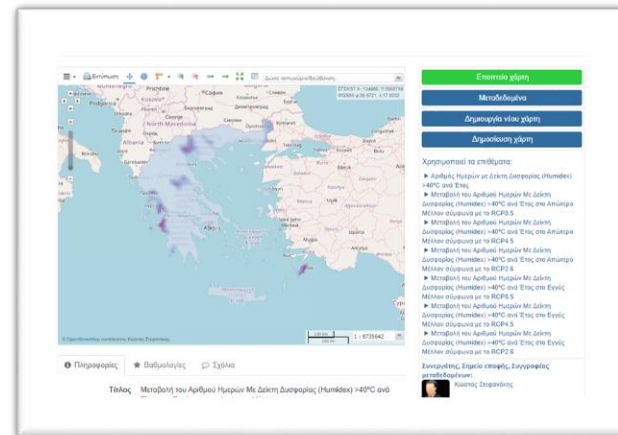

**Main actions for boosting the implementation of the 1<sup>st</sup> CCA policy cycle**

# OBJECTIVE 1

## The systematization and improvement of short- and long-term decision making for Climate Change Adaptation

### More and better information and data

- **Action C.7:** A publicly accessible **national adaptation hub** to provide information & resources for assisting decision makers.
- **Action A.4:** Open access to **geospatial climate projection data and maps** through the Geoportal of the (MEEN) Ministry of Environment and Energy [http://mapsportal.yopen.gr/thema\\_climatechange](http://mapsportal.yopen.gr/thema_climatechange)

## OBJECTIVE 1

The systematization and improvement of short- and long-term decision making for Climate Change Adaptation

### Build capacity for adaptation

- **Action C.6:** 13 regional and 2 national **capacity building workshops** involving decision makers and officers from national, regional and local authorities.
- **Sub-Action C1.4: Webinars** to introduce the geospatial climate projection data and maps in MEEN geoportal and provide good example of using climate projections in planning.
- **Sub-Action C1.4:** Thematic **peer-to-peer visits** for the national authorities' staff to benefit from the experience of their peers more advanced in the adaptation process **in other EU Member States.**

### EU and international cooperation

- **Workshops** to enhance transnational and EU cooperation.

## OBJECTIVE 2

The linking of Climate Change Adaptation with a sustainable development model through Regional and Local Action Plans

### Action at regional level

- **Action A.1: Analysis of the 13 RAAPs** to identify knowledge gaps, funding needs and need for action at national level.
- **Sub-Action C1.5:** Recommendations and **guidelines for RAAPs** evaluation and review in 2026

[www.covenantofmayors.eu](http://www.covenantofmayors.eu)

### Action at local level

- **Action A.3: Good practice examples:** 3 Sustainable Energy and Climate Action Plans (SECAP) developed by the LIFE-IP AdaptInGR project using climate projections.
- **Action A.4: Open access climate data** to facilitate the development of SECAPs.

### OBJECTIVE 3

The promotion of actions and adaptation policies in all sectors, and particularly the most vulnerable ones

## Provide and replicate good practice examples ( Actions: A 3, C 2, C 3, C 4, E 2)

- 12 pilot CCA projects & 14 CCA case studies across 7 priority sectors
- Enabling replication and transfer of good practices in Greece and EU

Flood risk  
management  
(3)

Coastal zone  
management  
(3)

Forest fires in  
drought-prone  
(1)

Sustainable water  
management  
(3)

Urban planning &  
regeneration  
(2)

Landscape & land  
uses  
(9)

Archeological  
historical sites  
(5)

## Action C.4: Pilot assessments & guidelines for landscapes, land uses, Cultural Heritage

Area η Natura 2000

## Monitor Complementary Funding

- Recognize complementary funds
- Contact the respective managing authorities
- Collect, synthesise and update data and information through the elaboration of brief and phase reports.
- Recognize possible funding gaps and opportunities.

### Mobilise Complementary Funding

- Inform managing authorities on CCA priorities and needs.
- Inform the respective services and bodies implementing adaptation actions for the available funds.
- Inform the financial sector on the need for CCA funding and financial products development.

## OBJECTIVE 5

The strengthening of the adaptive capacity of the Greek society through awareness and dissemination actions

### Students (Action E.1)

- Teachers' kit + 13 regional seminars for teachers
- "Youth adapts" material + campaign (>100 schools)
- Other educational activities: e.g. school competitions

### General public (Action E.1)

- 2 waves of public opinion research to determine the level of awareness
- 13 regional info-days (launched 2021)
- 3 conferences
- National adaptation hub
- Other awareness raising activities: e.g. tv spots, social media

### Professional groups (Actions E.1, A.4, C.6, C.7)

- 4 waves of surveys & interviews with stakeholders to determine the level of awareness
- Provide info and data: Climate Projections Geoportal + National Adaptation Hub
- Build capacity: 13 regional capacity building workshops

**Thank you for your  
attention!**

LIFE-18 PRE IT 003 - The VEG-GAP project has received funding from the LIFE Programme of the European Union

# Veg Gap

Vegetation for Urban Green Air Quality Plans

<https://www.lifeveggap.eu>

3 December 2018 – 3 May 2022

Gaia Righini, Mihaela Mircea  
ENEA

# Why VEG-GAP?

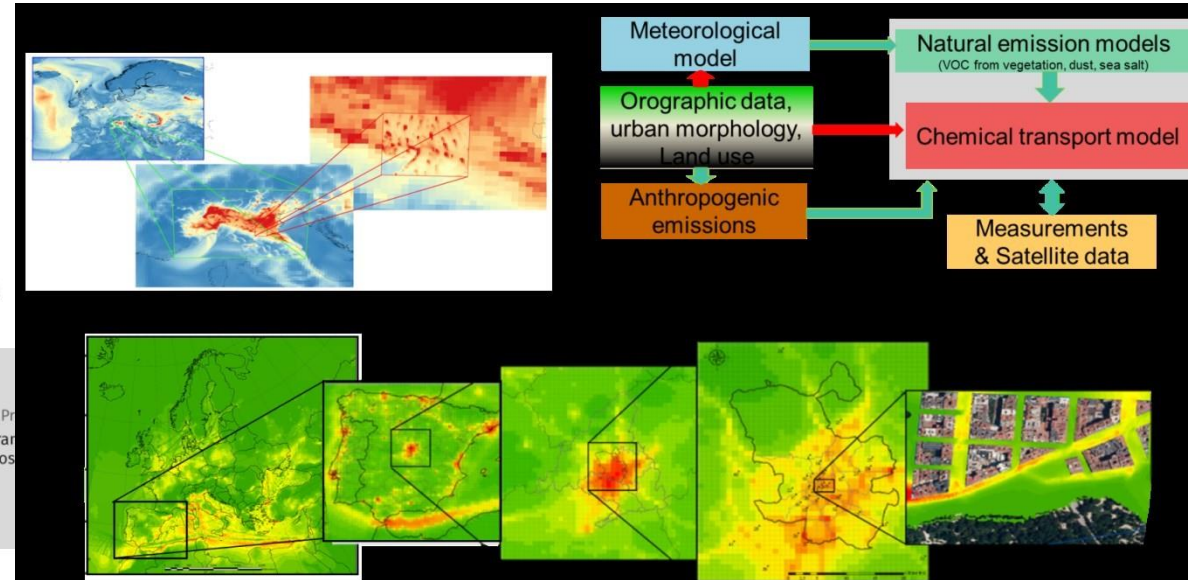

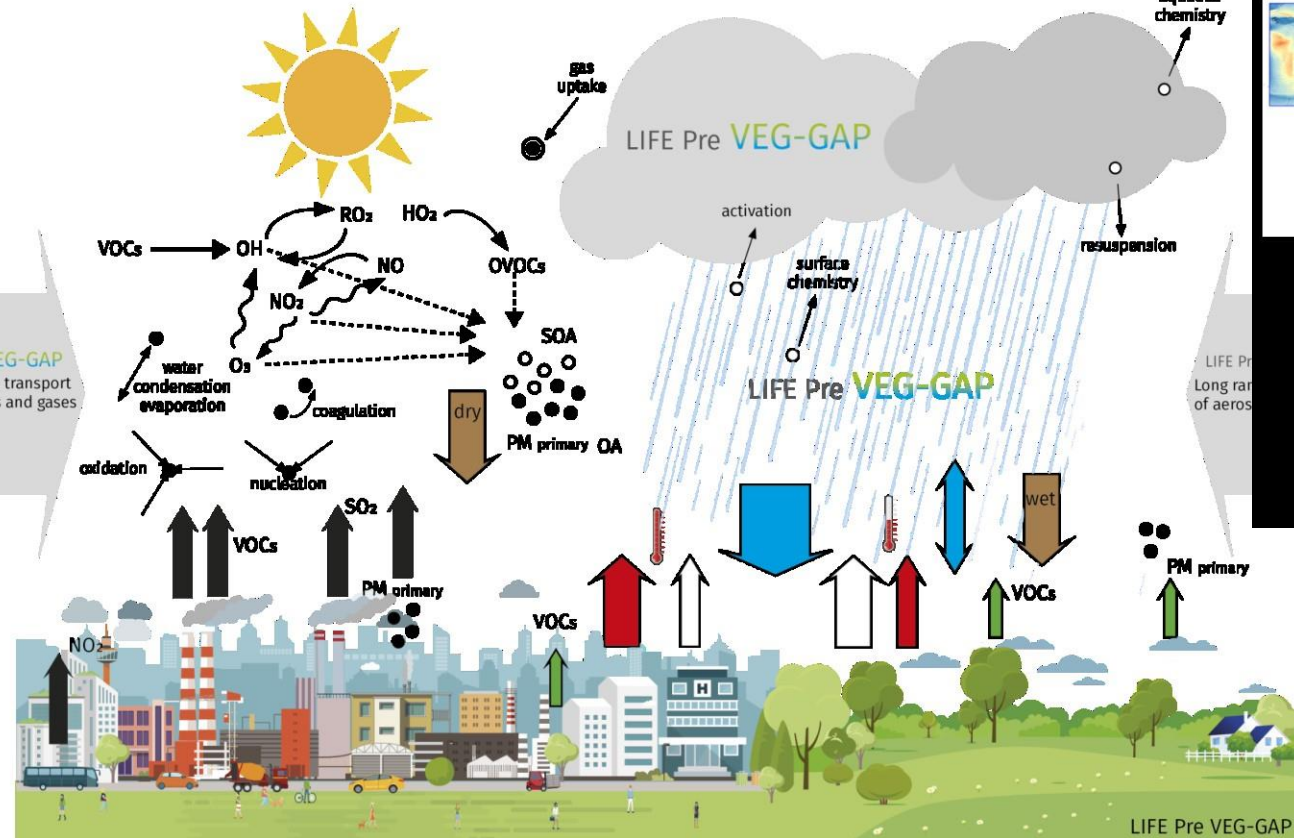

**a holistic approach for quantifying vegetation effects on atmosphere**

- **quantify the effect of urban vegetation ecosystems on air temperature (urban heating and cooling patterns) and its impact on air quality**
- **quantify the contribution of vegetation ecosystems both as source and sink of air pollution in urban areas**

# VEG-GAP instruments and data

**Fluxes:** ↑ anthropogenic emissions    ↑ biogenic emissions    ↑ heat    ↑ water vapour  
 ↓ dry and wet deposition    ↓ impact on natural resources, human health, air quality, weather  
 ~~~~~> photochemical reaction

# VEG-GAP approach = Air Quality Plans approach

## VEG-GAP and Air Quality Plans

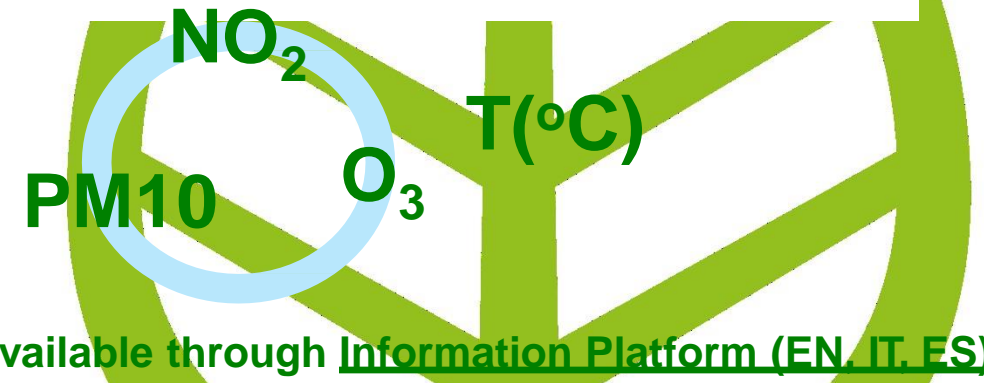

Air Quality Plans (AQP) are instruments introduced by the Ambient Air Quality Directive 2008/50/EC (AQD50) in order to achieve EU standards.

AQPs is to set measures to reduce air pollution. The assessment of the effectiveness of possible measures in achieving compliance with AQD50 Limit or Target values is performed with AMS. The difference between an AMS simulation without measures and a simulation with measures shows the effectiveness of a measure.

VEG-GAP reveals the effectiveness of vegetation for air quality and temperature by showing the difference between an AMS simulation with actual vegetation and a simulation without vegetation. Thus, it is providing support to both City Air Quality and Climate Change Plans.

The effect of vegetation on air quality and temperature should be assessed by considering the multiple interactions between vegetation and atmosphere at city scale, for different years, in order to ensure a major positive effect of new interventions.

<https://veggapatform.enea.it>

Simulation with vegetation:  
reconstruct the real atmosphere

Simulation without vegetation:  
hypothetical scenario

vegetation effects

VEG-GAP results available through Information Platform (EN, IT, ES)

Two Information Platform versions are available:

BASIC Platform

also called e-Learning Platform conceived to guide citizens and non-expert users in a smart exploration of the final results of Veg-Gap simulations, in terms of vegetation effect on temperature and air quality.

BASIC

ADVANCED Platform

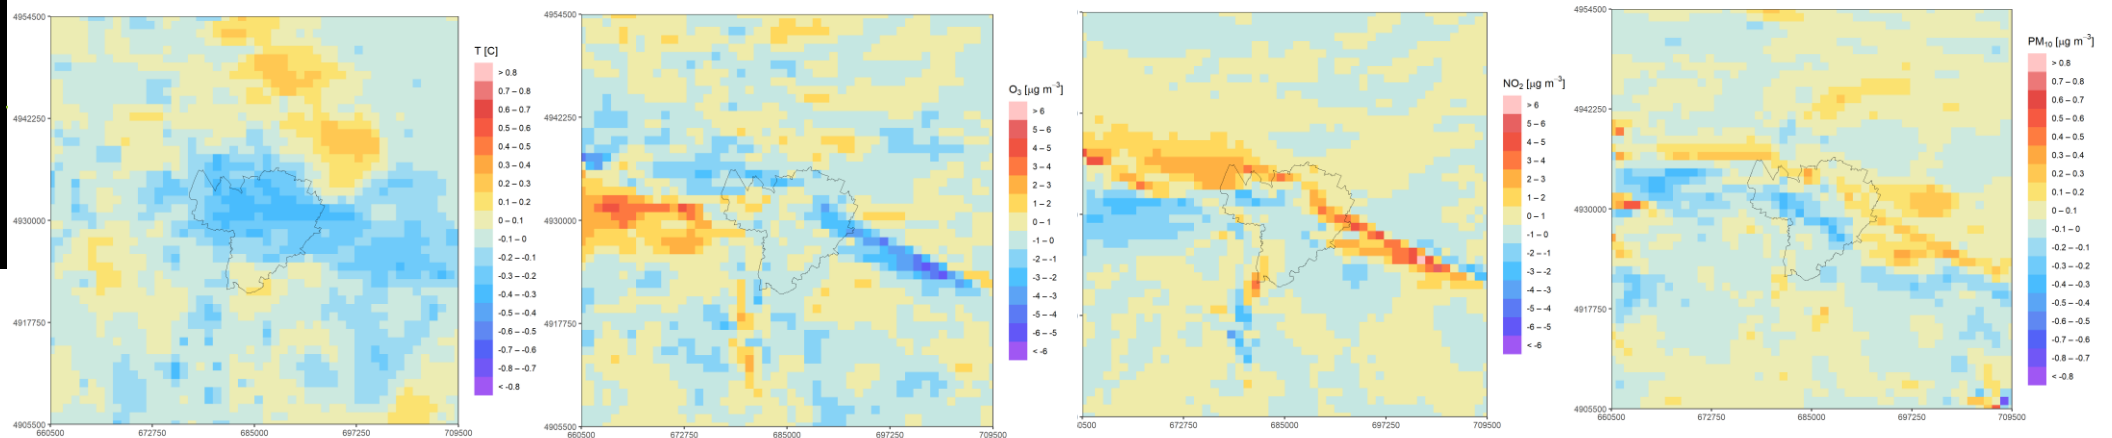

for expert people interested in analysing, comparing and downloading all the Veg-Gap available information layers on vegetation and air quality, not only in visualizing the final project results.

ADVANCED

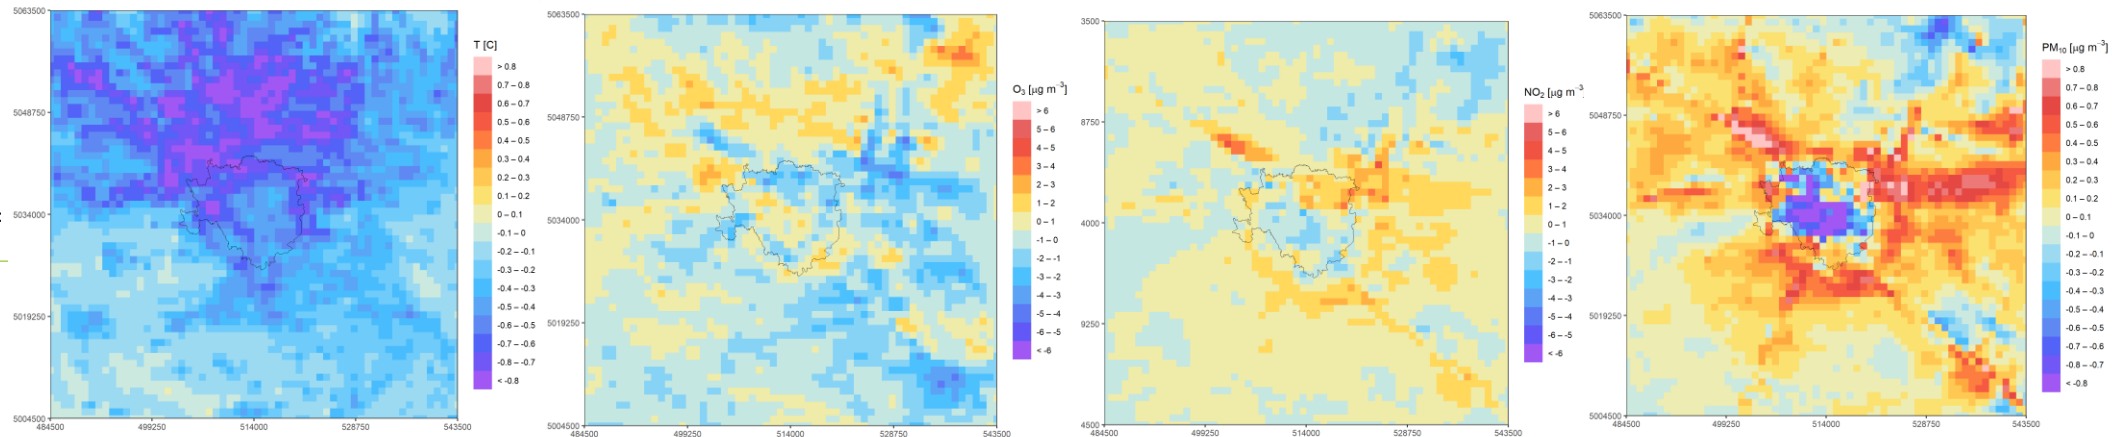

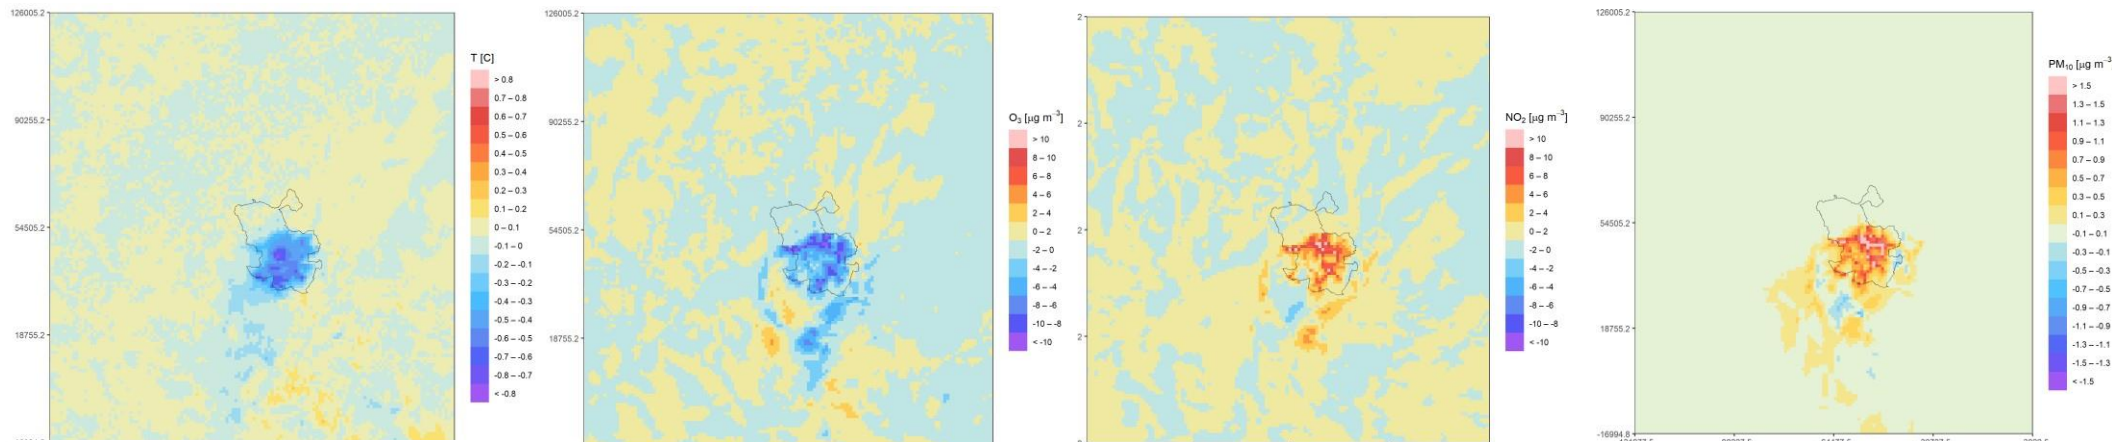

- Present vegetation
- Future vegetation: urban forests, green infrastructures, green roofs and walls, etc.

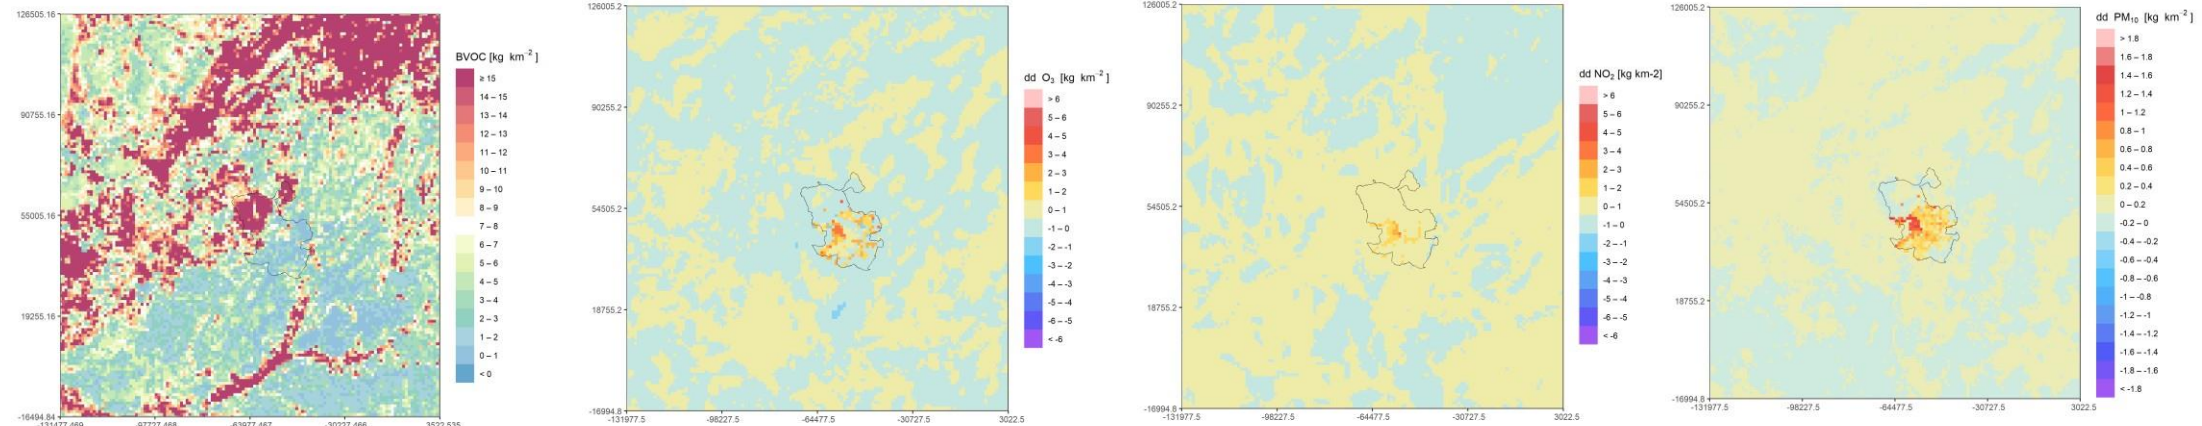

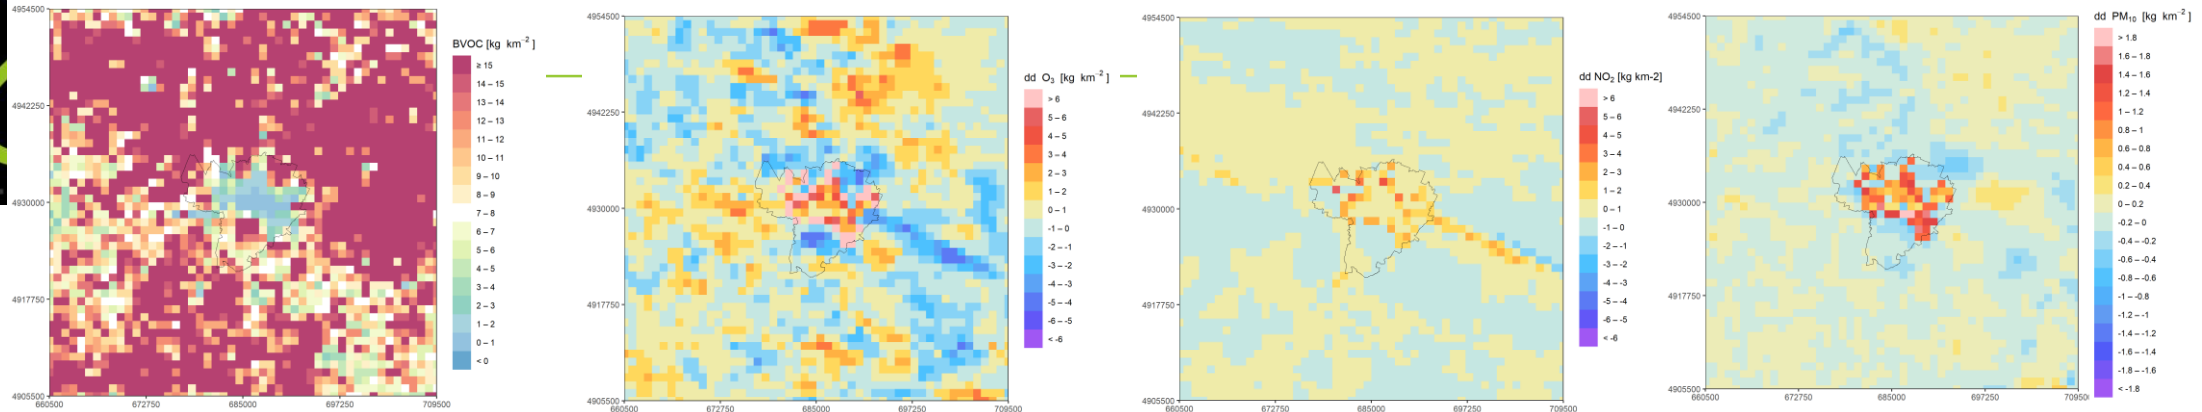

# Vegetation effects on temperature and air concentrations – daily average

13 July 2015  
Veg-NoVeg

# Current Vegetation effects on air depositions and BVOC emissions – daily sum

13 July 2015  
Veg-NoVeg

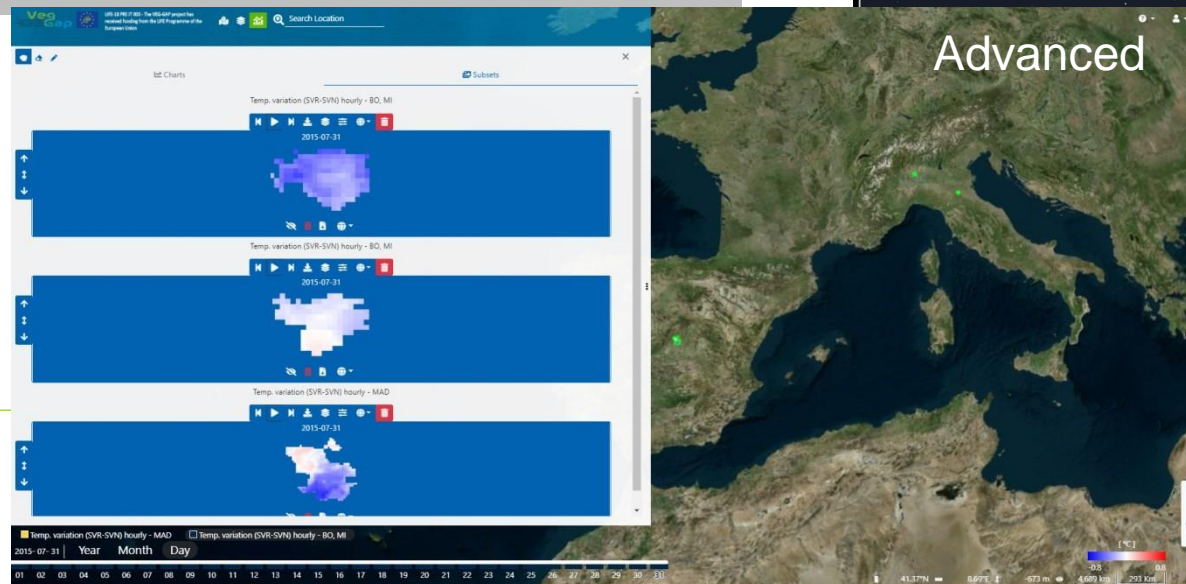

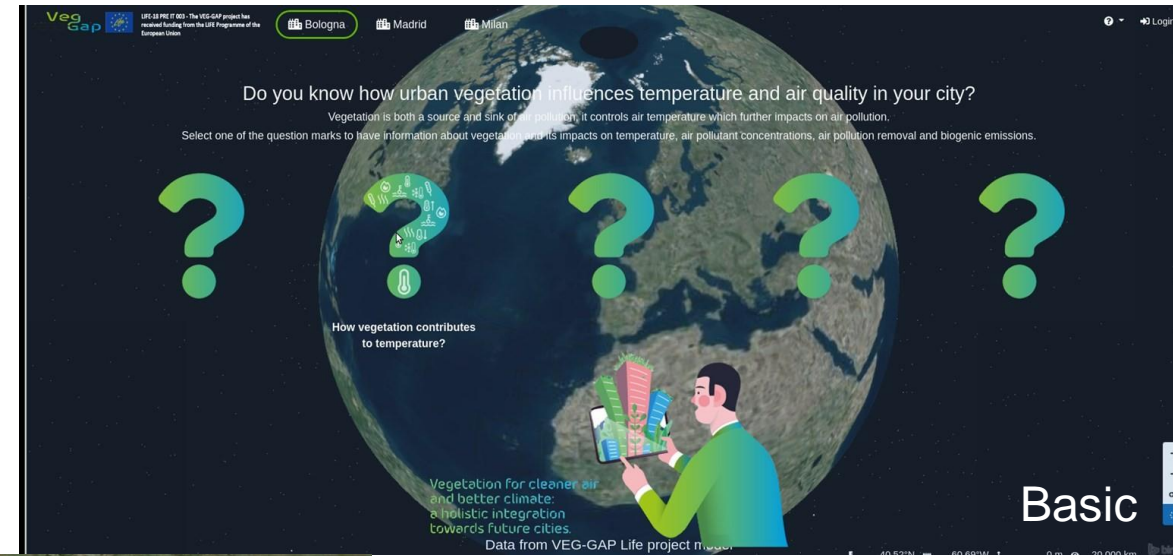

# Data for BASIC and Advanced Information Platform

## Platform

**Information Platform: BASIC for general public and ANCED for other stakeholders** equipped with an user guide for visualization, download, etc.

- Simulation results for the current (real) and vegetation removal scenarios for the desired category:
  - Vegetation
  - Temperature
  - Pollutant concentration (NO2, O3, PM10)
  - Dry deposition (NO2, O3, PM10)
  - Biogenic emissions (Isoprene, Terpene, BVOC total)
  - Other parameters ADVANCED (humidity, wind, precipitation etc)

<https://veggapplatform.enea.it/>

# Operational framework to evaluate multiple interactions between vegetation and atmosphere in cities

## Guidelines:

- ❖ Guidelines on mapping vegetation characteristics in urban areas
- ❖ Guidelines on estimating BVOC emissions
- ❖ Guidelines on relating vegetation ecosystem urban heat island and air pollution for supporting AQPs of municipalities.
- ❖ Guidelines and support tool for estimating impact of urban ecosystems/vegetation on health and ecosystem risks due to their effect on air pollution in partner municipalities in support to AQPs

# CLIMPACT: The Greek Initiative for studying the Climate change and its impacts”

- The proposed initiative aims to create a scientific core of excellence in research, to produce new knowledge on climate change, as there is currently a core of Greek scientists actively involved on climate change issues.

Our country can utilize the significant number of terrestrial measurements (EMY, METEO), the current infrastructure of the road map (PANACEA, HIMIOFoTS) as well as the satellite data, producing innovative information necessary for the more accurate quantification of climate change and its effects.

## Aims of CLIMPACT

- The optimization of the existing climate services and early warning systems for natural disasters in Greece, including the supporting observations from terrestrial networks, aerial platforms and satellite Earth observation systems collected in the relevant national infrastructures
- Utilization of new research results and methodologies in the production of original climate services and innovative early warning systems for natural disasters related to climate change.

## Aims of CLIMPACT

- The creation of a national database through the systematic collection, control and archiving climatic and environmental parameters, data from satellite earth observation systems, models and products, and their free and open use by the Greek and international scientific community.
- Valid and timely dissemination of information to decision-making bodies, cross-sectoral policy design (with emphasis on tourism, agriculture, forests / ecosystems, and civil protection), shielding of citizens, society and economy in general from the effects of Climate Change.

# Pillars of CLIMPACT

**Pillar 1: Science and High quality data related to Climate Change**

**Pillar 2: Climate Change: Impacts on agriculture, tourism and energy consumption – adaptation – mitigation – financial impact**

**Pillar 3: Hazard and risk estimation from Climate Change (production of early warning systems for fire and floods)**

# Participants

- National Observatory of Athens (NOA, Co-ordination)
- Academy of Athens
- Aristotle University
- University of Athens
- National Technical University of Athens
- Hellenic center of Marine Research (HCMR)
- Demokritos Research center
- University of Crete
- National technical University of Crete
- Research Center Athena
- National Center for Social Studies
- **The initiative is open to other Greek Institutes and Universities**

## Dialogue FORUM (CLIMPACT)

- *Forum on the adaptation and impacts of climate change on agriculture (October 2020; Thessaloniki)*
- *Forum on the adaptation and impacts of climate change on tourism (June 2021: Crete)*
- Forum on the adaptation and impacts of climate change on **floods**, Athens , November 2021).
- Forum on the adaptation and impacts of climate change on **marine environment** , March 2022).
- Forum on the adaptation and impacts of climate change on **air quality and health**, Kythera, June 2022).

Δίκτυο Έρευνας για την Κλιματική Αλλαγή και τις επιπτώσεις της  
**CLIMPACT**

## Impact of tourism on National Economy

- The participation of tourism activity is estimated at around EUR 22 billion. euro (2018 data).
- Based on the latest available data, at least one percentage point of 2018 growth, of 1.9%, comes from tourism.
- Also, tourism contributed directly to the creation of 12% of the country's GDP, while its direct and indirect contribution is estimated from 26% to 31%.
- At the same time, tourism contributes directly at 17% of employment and overall (directly and indirectly) between about 40%, while it is a key lever for reducing unemployment.
- In the Regions of Crete, the Ionian Islands and the South Aegean, tourism contributes directly to the creation of 47%, 71% and 97% respectively of the GDP of these destinations.

# The European Green Deal: reaching climate neutrality by 2050

Georgios Amanatidis, PhD

Parliamentary research administrator

*Policy Department for Economic, Scientific and Quality of Life Policies,  
European Parliament*

# EU's role on climate change

- The EU is competent to act by the **principle of subsidiarity** in all areas of environment policy, including climate change
- The EU has been a pioneer and a **role model** for countries across the world
- The EU's Environment Council already agreed in 1996 to **limit global average surface temperature rise to below 2°C** above pre-industrial levels
- The **EU share of global CO2 emissions** fell from 19.7% in 1990 to 8.7% in 2019
- Europe's early determination to take action on climate change was necessary to allow 195 countries to **commit to the Paris Agreement**

# The EU vision on climate change

A sustainable, fair and **prosperous** future for **people** and **planet** based on European values.

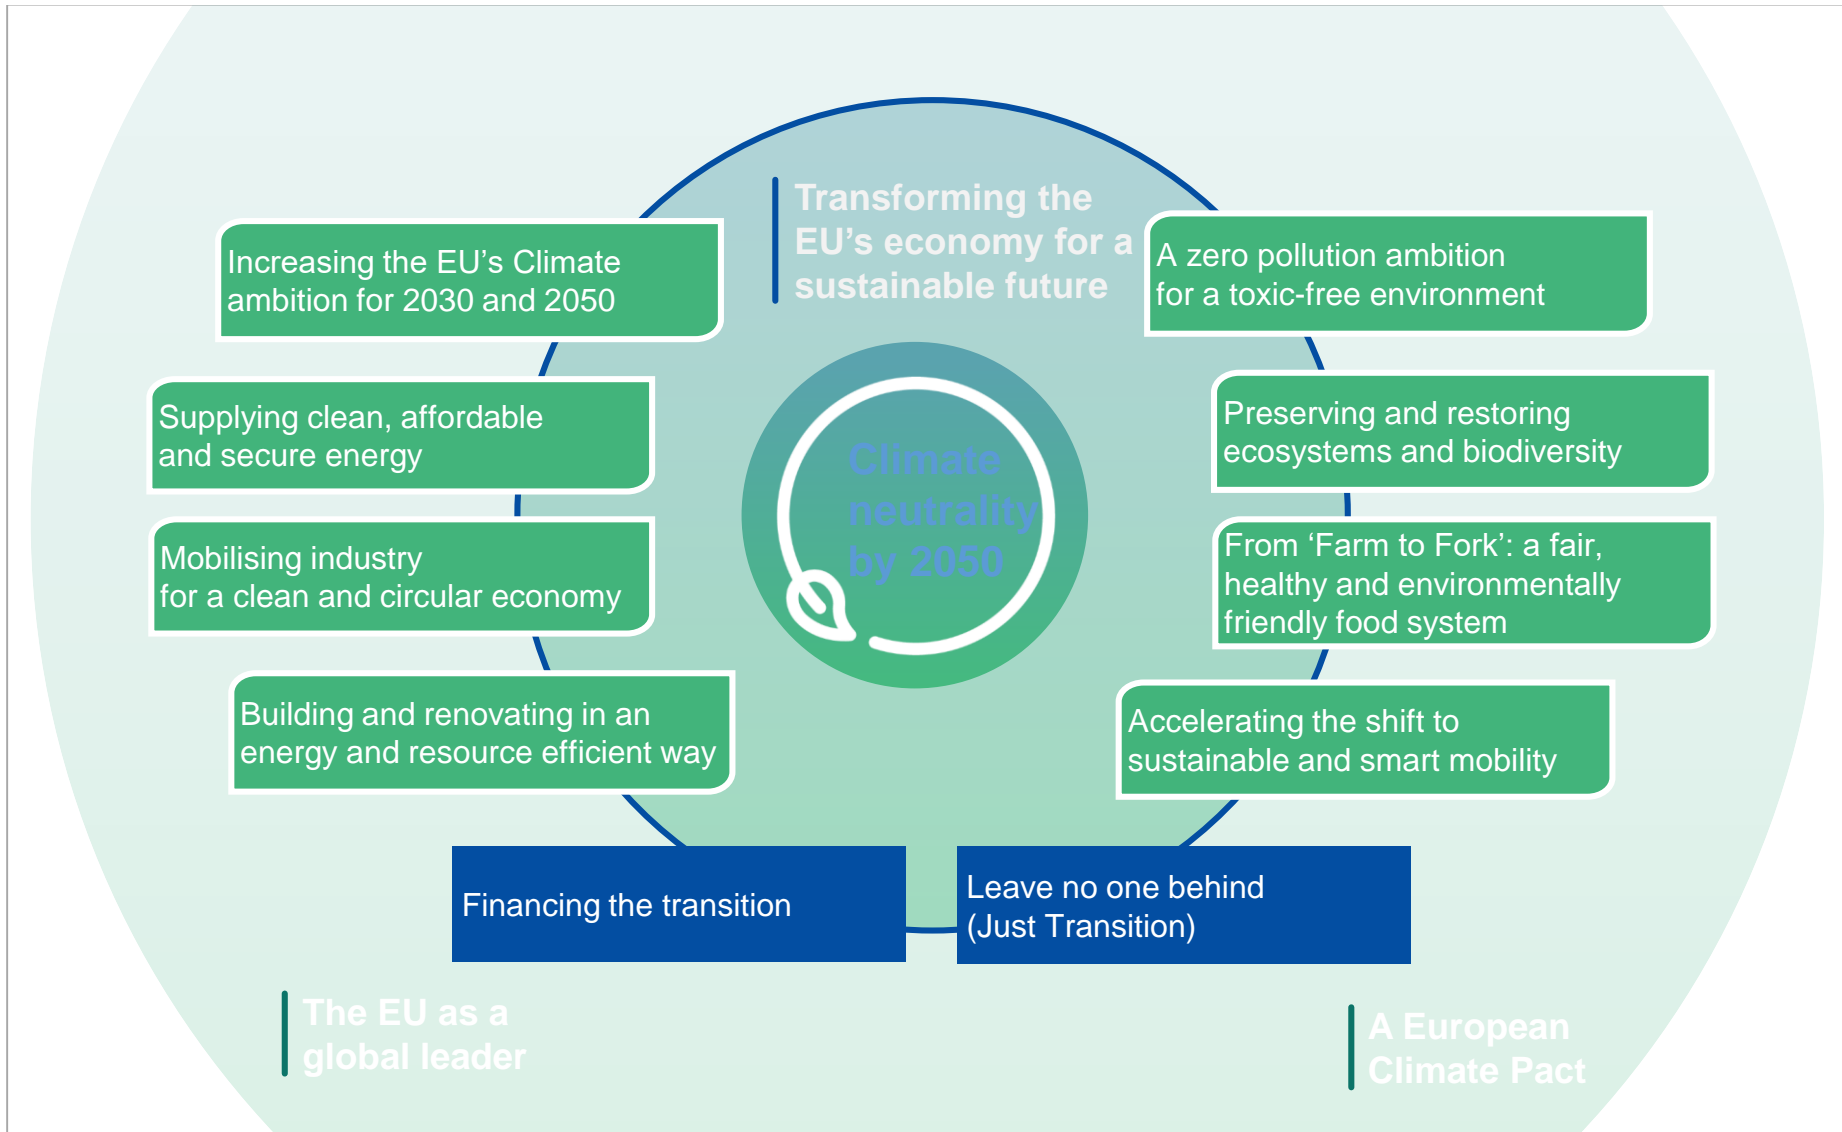

- Tackling **climate change**, an existential threat to Europe and the world
- Implement the 2015 **Paris Agreement** and achieve **carbon neutrality by 2050**
- Helping to achieve the 17 **Sustainable Development Goals**
- Boosting the Union's **competitiveness and growth**

PARIS2015

# The European Green Deal

# The European Green Deal

Without action on climate change, the EU will see, in the lifetime of our children:

## Heat and drought

⚠️ **90,000** annual deaths as a result of heatwaves<sup>1</sup>

⚠️ **660,000** additional asylum applications per year in the EU at 5°C temperature increase<sup>2</sup>

⚠️ **16%** of species at risk of extinction at 4.3°C temperature increase<sup>3</sup>

## Economics

⚠️ **€190 billion** annual losses projected for a 3°C increase in global average temperature

Source: Ciscar et al., 2014: Climate impacts in Europe, the European Commission's Joint Research Centre PESETA II project

⚠️ Climate change could lead to a **20% food price rise** in 2050

⚠️ Globally, the number of **people at risk** of being forced from their homes by river flooding could increase to **50 million** a year

Source: Internal Displacement Monitoring Centre, Assessing the impacts of climate change on flood displacement risk, 2019

⚠️ **Economic costs of heat-related mortality** could amount to more than **€40 billion** per year

## Water and flooding

⚠️ **40%** less available water in southern regions of the European Union

⚠️ **2.2 million** people exposed to coastal inundation each year

⚠️ **Half a million** people exposed to river flooding each year

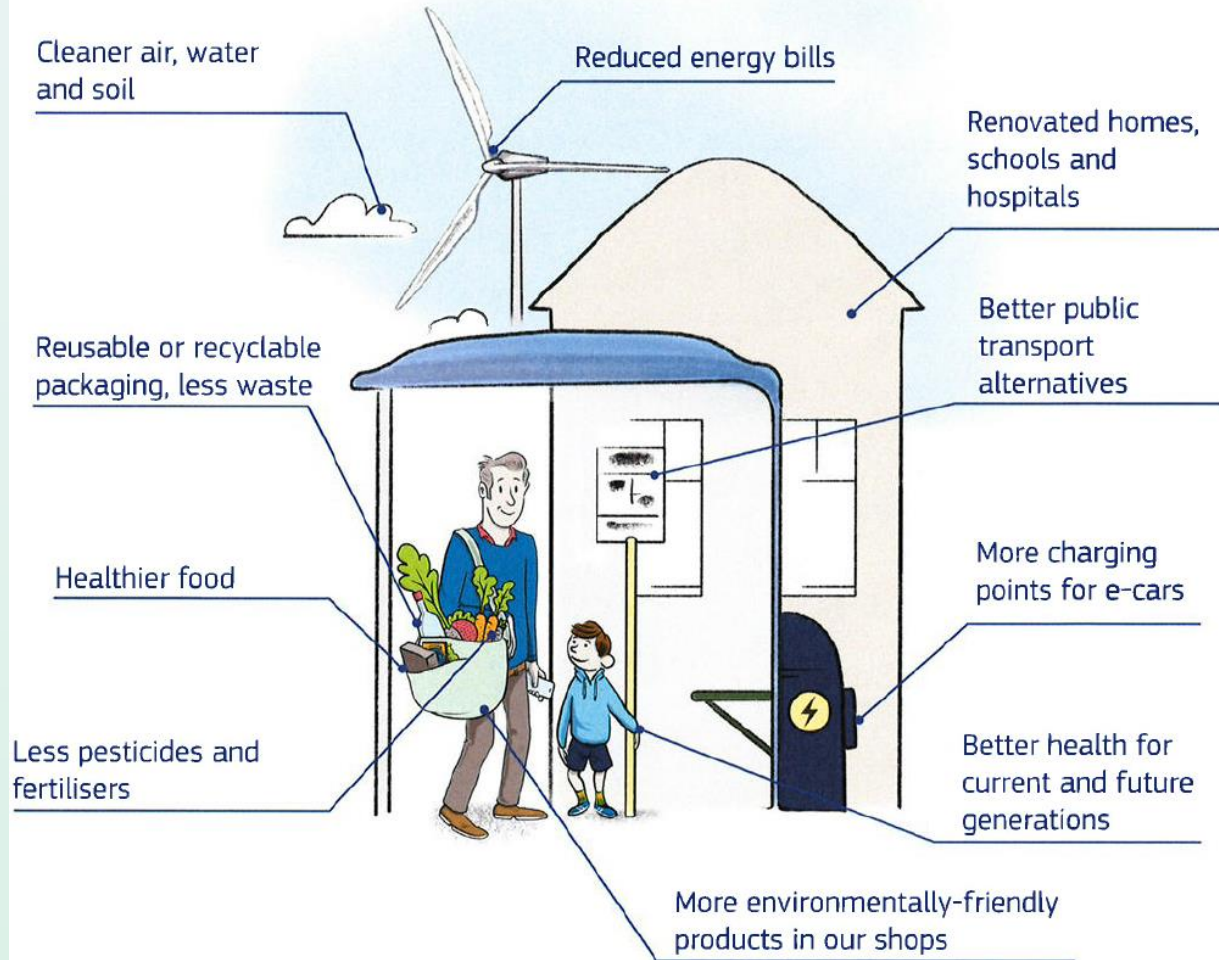

## Pollution

⚠️ **400,000** premature deaths per year today due to air pollution. This figure is expected to soar

# The European Green Deal

The European Green Deal will improve the well-being and health of citizens and future generations.

# The European Green Deal

Increasing the EU's  
climate ambition for 2030  
and 2050

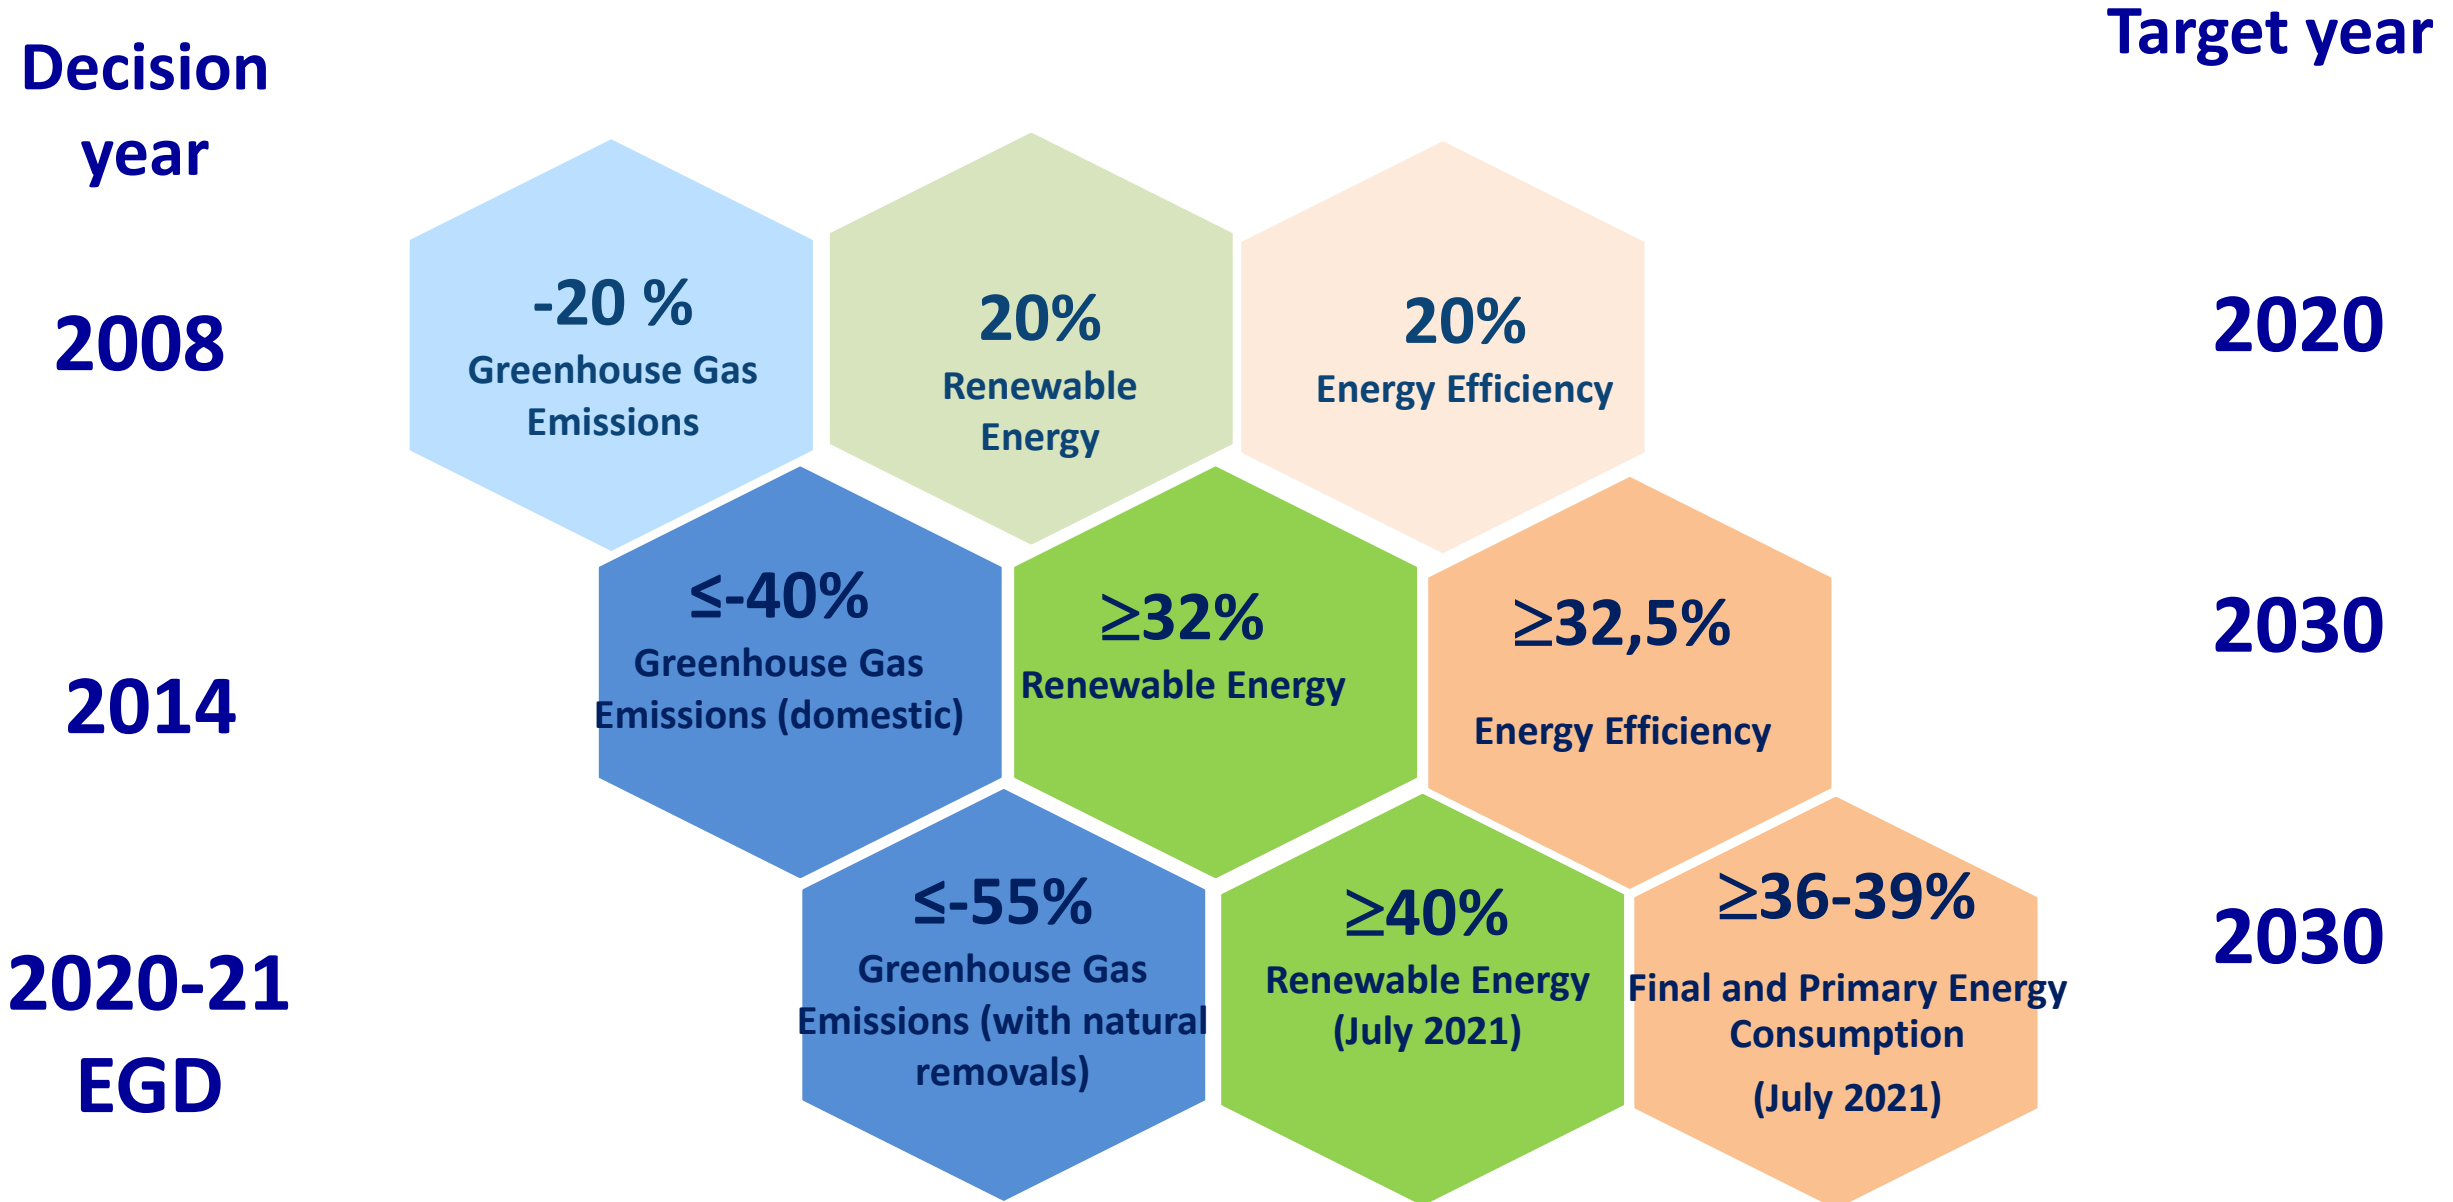

Including:

- **European 'Climate Law'** enshrining the 2050 climate neutrality objective and the intermediate target of 55% by 2030 in legislation (EU adopted on 21 April 2021)
- A new EU **Strategy on Adaptation** – EC adopted on 24 February 2021
- **Fit for 55:** review and revise where needed all relevant legislative measures to deliver on this increased ambition (EC adopted on 14 July 2021)

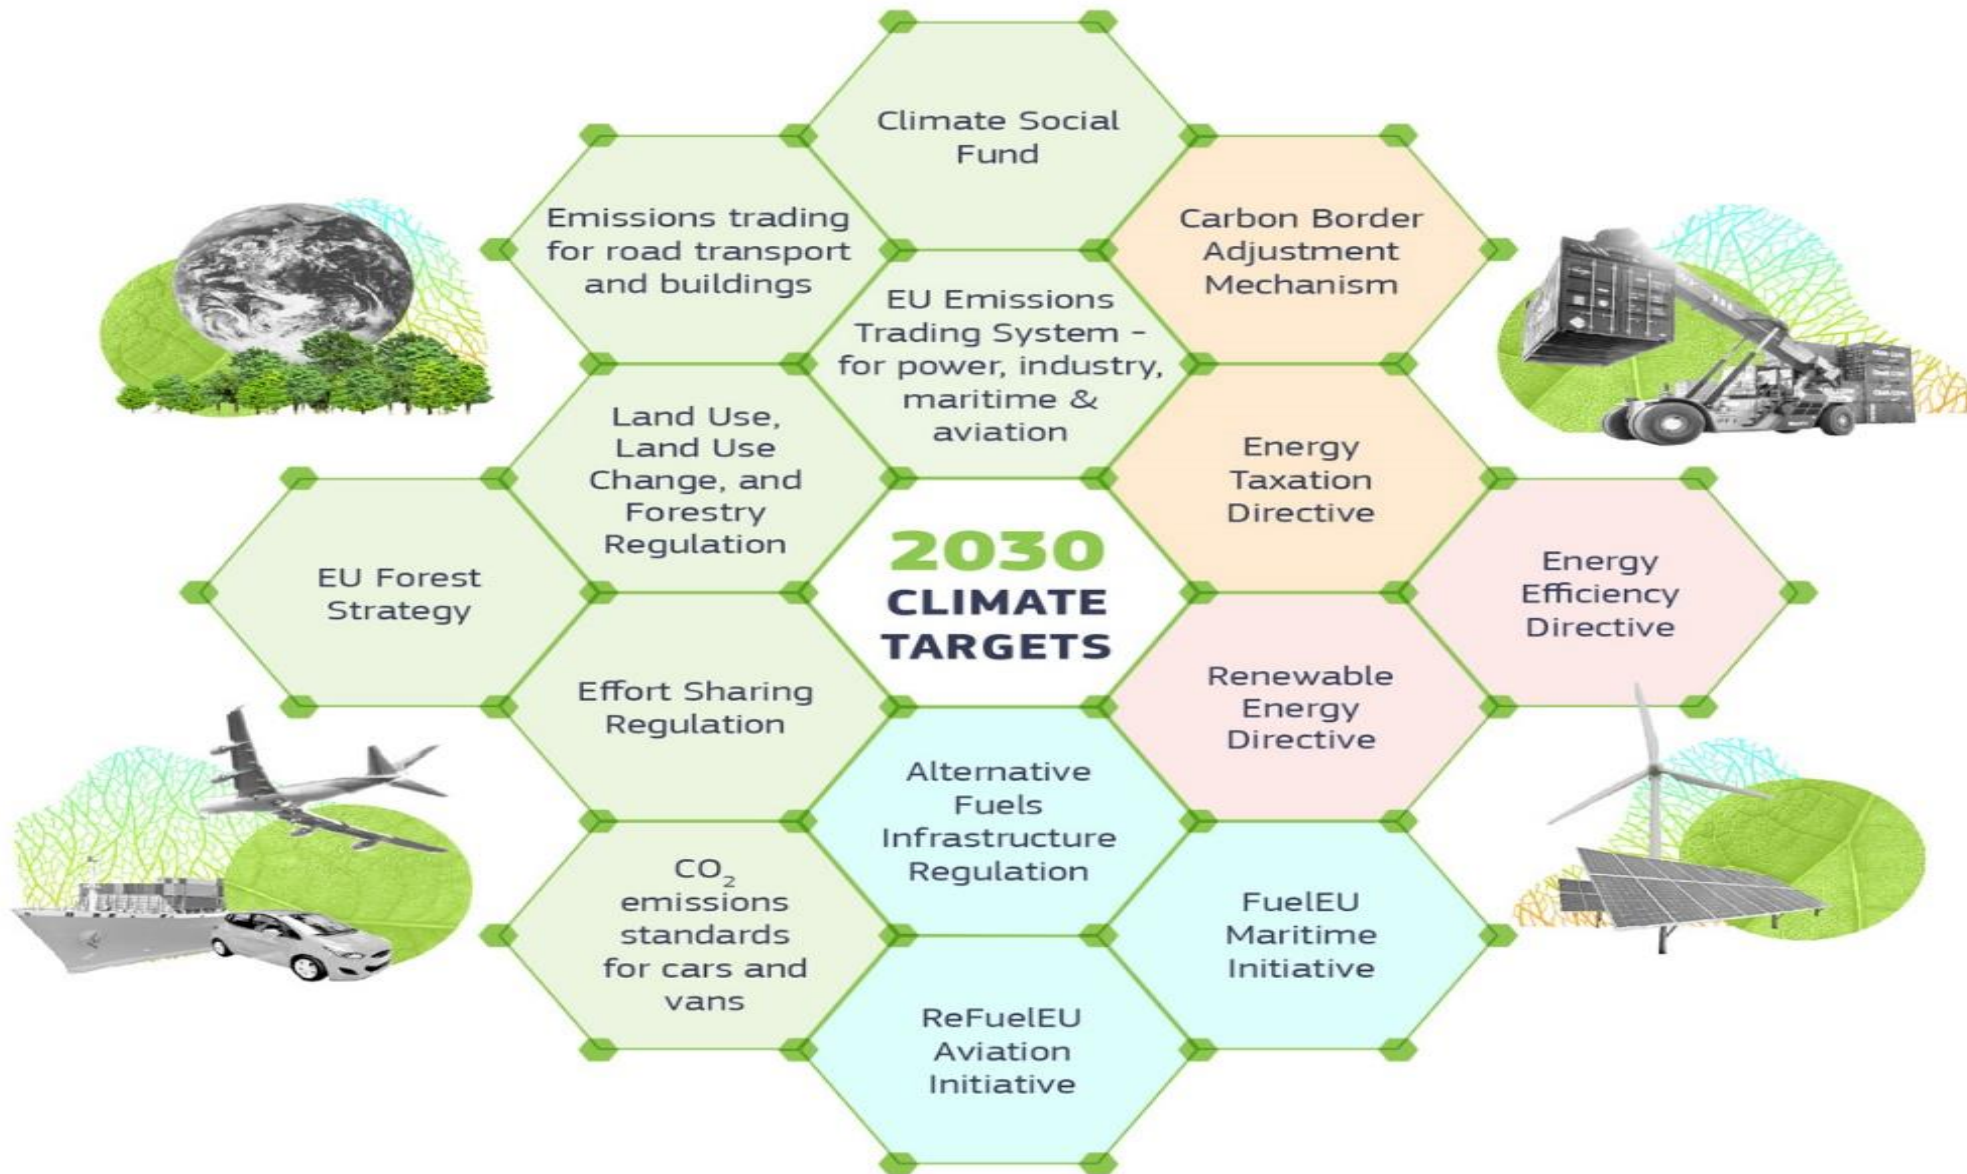

| The EU as a  
global leader

| A European  
Climate Pact

November 2021 Update

# The European Green Deal

## Financing the transition

- **30% of the EU budget** under the 2021-2027 multiannual financial framework (€1.074 trillion) and the NextGenerationEU (€750 billion) will have to be spent to fight climate change
- **Recovery and Resilience Facility (€672.5 billion)** - each national plan will have to include a minimum of 37% of expenditure related to climate
- **Just Transition Mechanism** worth €150 billion of public/private funds
- Initiatives to screen EU/MS **green budgeting practices** from 2020
- Review of **state aid guidelines for environment and energy**
- Review of the **Non-Financial Reporting Directive** in 2020
- **€84.9 billion for the Horizon Europe R&D program** and 35% of it will be set aside for climate-friendly technologies
- Stakeholders to identify and **remedy incoherent legislation** that reduces the effectiveness in delivering the European Green Deal from 2020
- Integration of the **Sustainable Development Goals in the European Semester** from 2020

Leave no one behind  
(Just Transition)

| The EU as a  
| global leader

| A European  
| Climate Pact

# Key messages: Climate change and its impacts

- Climate change is happening on a global scale and is attributable to human activity; it is adversely affecting humans and the planet while risks will increase over time.
- Rapid and decisive action, to cut GHG emissions sufficiently to keep temperature increase below 2°C above pre-industrial level, could greatly reduce these risks.
- Major near term benefits are arising from decarbonising the economy as a result of reduced air pollution and other co-benefits of climate change mitigation.
- Achieving the climate-neutrality goal requires massive investment and an unprecedented transformation of all sectors of the economy.
- Since the EU is responsible for only a fraction of global emissions, global leadership and engagement with international partners through trade and diplomacy are vital.
- The scientific community has important roles in generating new knowledge and countering misinformation on the climate change impacts, on factors increasing vulnerability, and on the effectiveness of adaptation and mitigation strategies, in close collaboration with decision makers.

# Climate change and health: adaptation and mitigation actions in Italy

**Paola Michelozzi**

*LIFE ASTI Final Conference May, 19 2022*

# Climate Change 2022 Intergovernmental Panel on Climate Change

The 6th Assessment Report of the IPCC strengthens the evidence about the human responsibility in the warming of the atmosphere due to emissions of greenhouse gases

There is *high confidence* that extreme events (e.g. heat waves) have become more frequent and more intense and this trend will continue in the future

Southern Europe is one of the most vulnerable areas to climate change related stressors (droughts, heat waves, forest fires...)

# Extreme heat in Europe

## Number of hot days (maximum temperature > 30°C) per year

Current 1985-2005

RCP 8.5 Far future 2081-2100

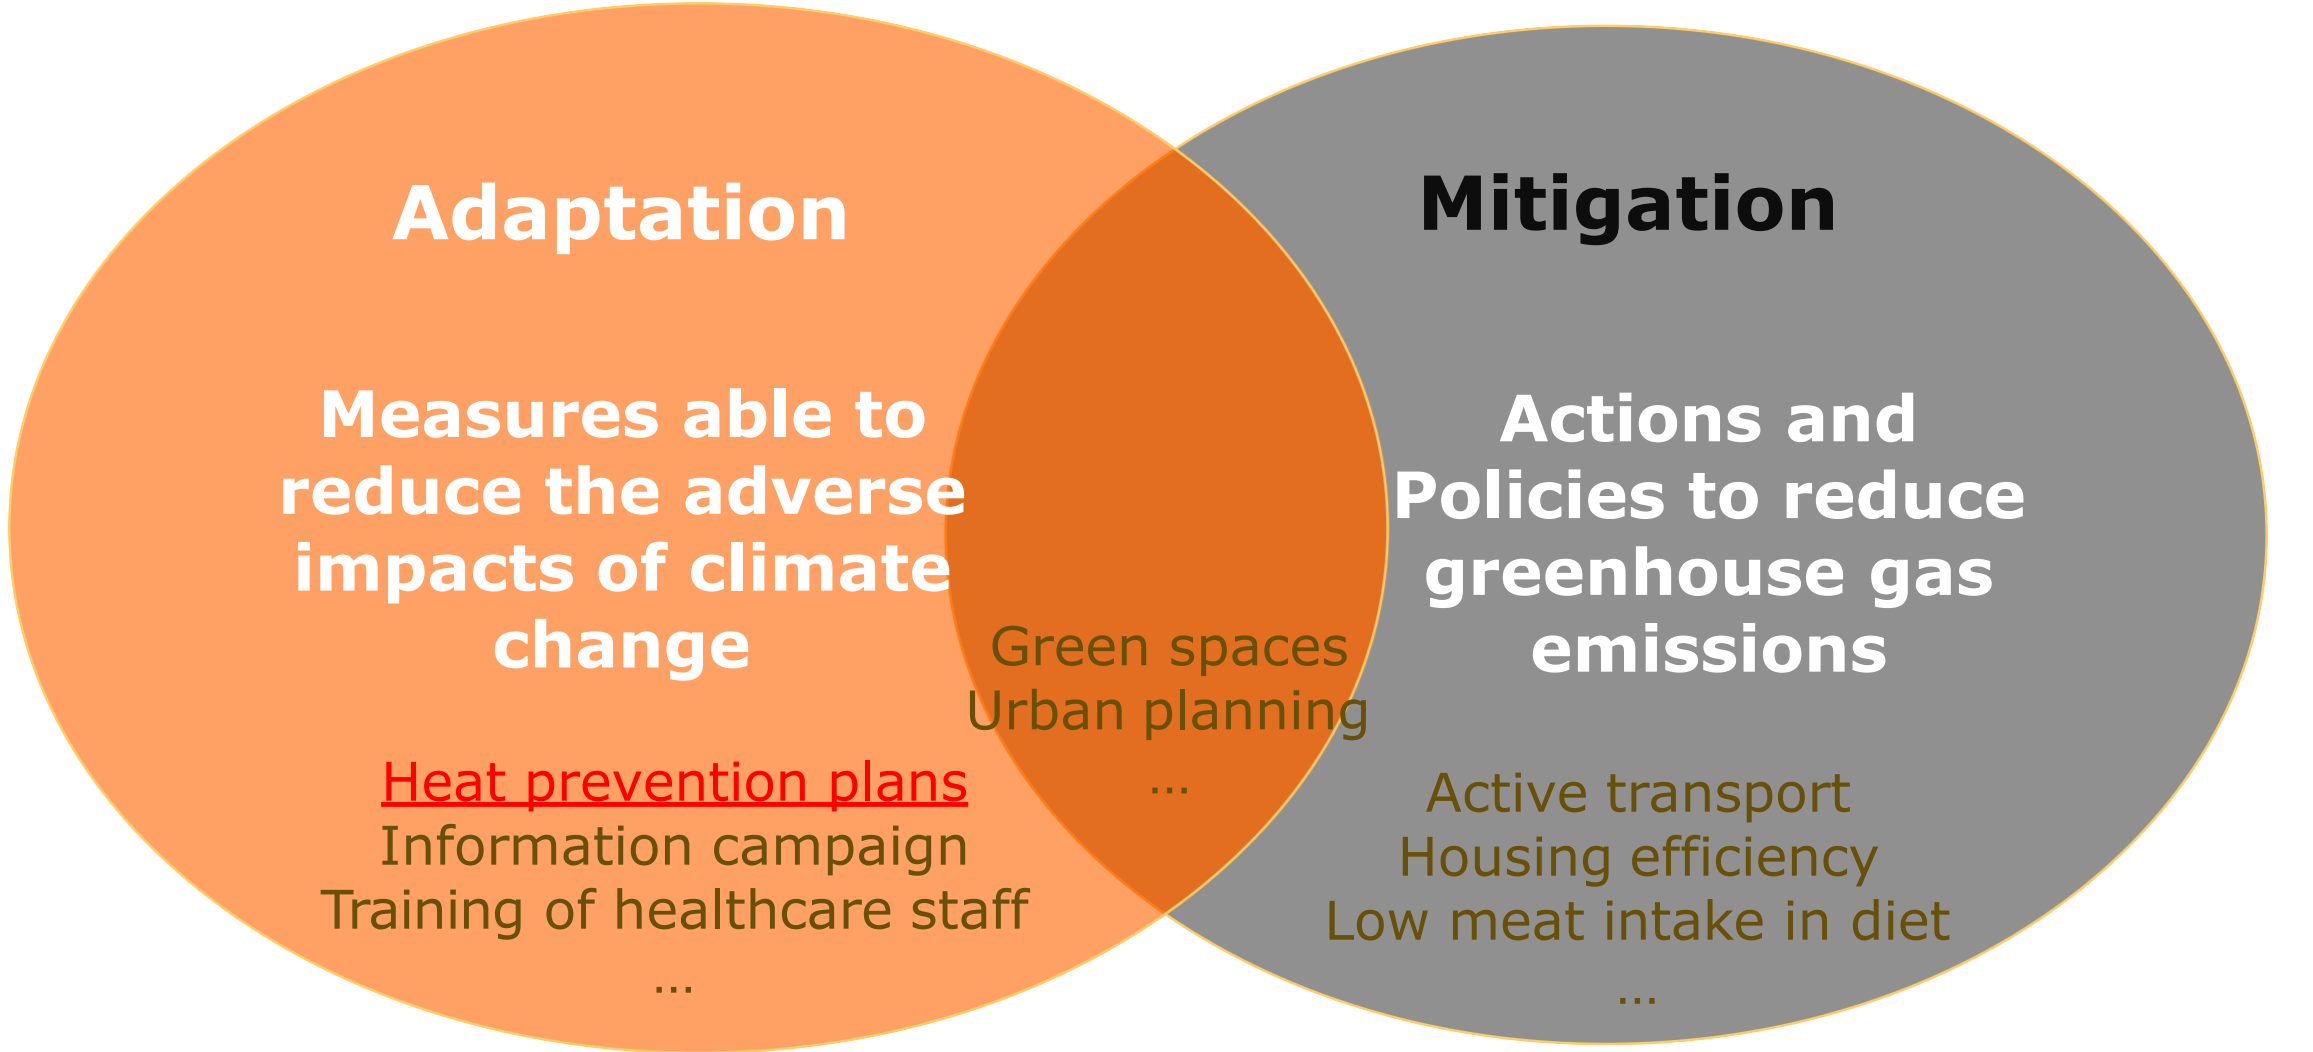

In Europe, the number of hot days is expected to almost quadruple during the 21st century under the high-emissions scenarios (RCP8.5) with largest absolute increases in Southern Europe

Source: [EEA 2022](#)

- Extreme heat have been linked to an increased risk of heat-related mortality and morbidity, of occupational injuries and changes in work productivity
- **Vulnerable population** includes: elderly, children, (pregnant) women, socially isolated people and those suffering from pre-existing medical conditions, including cardiovascular disease, kidney disorders, diabetes and respiratory disease
- Implementing **adaptation measures** is important to reduce the risks of future heat waves.

# WHO Core elements of heat-health action plans

- Identification of lead body, interdepartmental co-operation
- Accurate and timely site-specific warning systems
- Information campaign (general pop, at risk groups, care givers etc.)
- Preparedness of the health/social care system
- Identification of vulnerable subgroups
- Real-time surveillance (mortality, ER visits, ambulance calls, Help lines)
- Reduction in indoor heat exposure
- Long-term urban planning

### Piano nazionale per la prevenzione degli effetti del caldo sulla salute

Il Piano nazionale per la prevenzione degli effetti del caldo sulla salute è stato avviato dal Ministero della Salute nel 2005, attraverso specifici progetti del Centro nazionale per la prevenzione e il controllo delle malattie (Ccm), ed è coordinato dal Centro di competenza nazionale Dipartimento di Epidemiologia SSR Regione Lazio (DEP Lazio). L'obiettivo è favorire il coordinamento interistituzionale ai vari livelli e fornire linee operative per la creazione di un sistema centralizzato di previsione e prevenzione degli effetti del caldo sulla salute. Dal 2009, il Piano è incluso nelle Azioni Centrali dei Programmi e Progetti del Ccm.

## Consigli per proteggersi dal caldo durante l'epidemia COVID-19

Ogni anno, il caldo è responsabile di problemi di salute per molte persone, specialmente anziani, persone con una malattia cronica, bambini piccoli, lavoratori all'esterno. Il caldo può causare stress da calore e colpo di calore ed aggravare le malattie preesistenti, come le malattie cardiovascolari, respiratorie, renali o psichiche. Gli effetti avversi del caldo sulla salute possono essere contrastati da misure di prevenzione, ma è essenziale che la popolazione continui a proteggersi anche dal rischio di infezione da COVID-19.

Ministero della Salute Ccm Centro Nazionale Prevenzione e Controllo Malattie

## COME PROTEGGERSI DAL CALDO DURANTE L'EPIDEMIA COVID-19

### Fuori casa

- Evitare di esporsi al caldo e al sole diretto: temperatura e umidità elevate non possono prevenire il rischio di infezione, mentre possono provocare sintomi associati al caldo e al sole.
- Uscire nelle ore più fresche, mantenendo la distanza di almeno un metro dalle altre persone e coprendo naso e bocca con una mascherina. Quando disponibili, utilizzare i igienizzanti per le mani, indossare i dispositivi di protezione anche se fa caldo.
- Recarsi in luoghi pubblici come parchi e giardini nelle ore più fresche della giornata ripartendo sempre le distanze di sicurezza. Evitare i luoghi affollati.

### In casa

- Assicurare un adeguato ricambio di aria è utile per ridurre il rischio di trasmissione del virus: la ventilazione naturale determina il miglior ricambio dell'aria rispetto alla ventilazione meccanica.
- Assicurarsi che le stanze dove si soggiorna più a lungo siano mantenute fresche. Se si usa un climatizzatore, effettuare la pulizia dei filtri e comunque aerare spesso la stanza.
- Seguire le buone regole di igiene della casa, privilegiando detergenti a base di alcool o candeggina per eliminare possibili tracce del virus.

IN GENERALE, SCEGLIERE UNO STILE DI VITA FISICAMENTE ATTIVO E UNA DIETA SANA. BERE PIÙ SPESSO QUANDO FA MOLTO CALDO E RINFRESCARSI BAGNANDOSI CON ACQUA FRESCA

### PER CHI È PIÙ VULNERABILE

- I sottogruppi suscettibili al caldo sono più a rischio di complicazioni in caso di COVID-19.
- Restare a casa, sia per proteggersi dal caldo, che per limitare il rischio di infezione.
- Garantire l'assistenza e la continuità delle terapie. Non sospendere le terapie in corso. Non ci sono farmaci che aumentano i rischi associati a COVID-19.
- Informarsi sulle nuove modalità da seguire per chi ha una malattia cronica affinché possa effettuare le necessarie visite programmate, terapie o analisi cliniche.
- Accertarsi che familiari, amici e vicini vulnerabili che vivono più spesso o utilizzando gli igienizzanti ed evita di frequentarli il uso, indossare i dispositivi di protezione anche se fa caldo.

Estimate in s...  
me proteggere i...

## Proteggiti dal caldo anche durante l'epidemia COVID-19.

Evita di esporsi al caldo e al sole diretto: la temperatura elevata possono prevenire nel corso l'infestazione da COVID-19, mentre possono provocare disturbi associati al caldo e al sole. Proteggi te stesso e gli altri, lavando le mani più spesso o utilizzando gli igienizzanti ed evita di frequentarli il uso, indossare i dispositivi di protezione anche se fa caldo.

COME VINCERE IL CALDO

Informazioni e raccomandazioni per il Medico di medicina generale

# MORTALITY SURVEILLANCE SYSTEM - SISMG

- Near-real time mortality surveillance
- monitoring impacts during HW events to adjust response actions
- Evaluation of HHAP
- Regular estimation of heat wave impacts (temporal changes)
- In 2021 will be **extended to 50 cities in Italy**

# Mortality Surveillance System during Covid-19 epidemic

- Since the start of the epidemic, the mortality surveillance system allowed estimation of **peaks in total mortality** in weekly reports
- It allowed to characterize the **geographical heterogeneity** and differences **by age and gender**

Excess mortality (%) in the epidemic waves

Excess mortality (%) by age and gender

Francesca de'Donato, Matteo Scortichini, 2019

- Urban settlements are areas with degraded environmental quality and increased thermal discomfort.
- Significantly increased risk of morbidity and mortality due to high temperatures.

# UHI impacts - Health

**1998-2017:** More than **166,000** people died due to extreme temperatures.

**2003:** **70,000** people in Europe died as a result of the June-August event.

**2010:** **56,000** excess deaths occurred during a 44-day heatwave in the Russian Federation.

**2015:** **175 million** additional people were exposed to heat waves compared to average years.

**2000 – 2016:** the number of people exposed to heat waves increased globally by around **125 million**.

# UHI impacts - Energy

- In the example of New Orleans, the electric load is steadily increasing at temperatures above 25 –27°C.
- Significant increase in energy consumption.

Sailor, D. J. 2002

# LIFE ASTI: General information

**Location:** Thessaloniki, Greece + Rome, Italy

**Replication:** Heraklion, Pavlos Melas, Greece

**Duration:** 01/09/2018 - 31/08/2022

## Project implementors:

- **Aristotle University of Thessaloniki (coordinator)**
- Institute of Atmospheric Sciences and Climate, National Research Council of Italy
- Municipality of Thessaloniki
- Azienda Sanitaria Locale Roma 1
- Geospatial Enabling Technologies Ltd.
- Sympraxis Team P.C.

# The impact of future climate change scenarios on UHI - Thessaloniki

## HEAT WAVE DAYS (HWD)

### The criteria:

- $T_{\max} \geq 37^{\circ}\text{C}$
- $T_{\text{avg}} \geq 31^{\circ}\text{C}$

Metaxas, D. A., and METAXAS DA. "Heat waves from a synoptic point of view." (1980)

Thessaloniki hardly gets 40s or higher temperatures under the present climate

Only 2.6 (0.8) days per year are considered as heat wave days for urban (non-urban) area

By 2100, we should expect a month of heat wave conditions for the urban area of Thessaloniki

# Difference between urban and non-urban areas

Average Tapp at 03UTC in July

2006-2010

2096-2100

**Tapp<sub>max</sub> vs Relative Risk**  
(exposed mortality/non-exposed mortality)

Francesca de'Donato, Matteo Scortichini, 2019

Considering **no changes in the urban structure and size:**

- **Tapp will increase less in the urban fabric** (by 0.5-1°C) comparing to the surrounding areas by **2100**, but will be still higher. Increased Tapp<sub>max</sub> associates with increased RR (1.4-1.6) by 2100.
- **Tapp is increased early in the morning during summertime in the urban area by +3-4°C** compared to the surrounding areas.

$$TAPP = -2.653 + 0.994 T + 0.0153 * T_{dew}^2$$

# Meteorological modeling of the Urban Heat Island effect

Thessaloniki, May 19 2022

**Dr. Serafim Kontos**  
**Aristotle University of Thessaloniki**

The project *Implementation of a forecAsting System for urban heaT Island effect for the development of urban adaptation strategies - LIFE ASTI* has received funding from the LIFE Programme of the European Union.

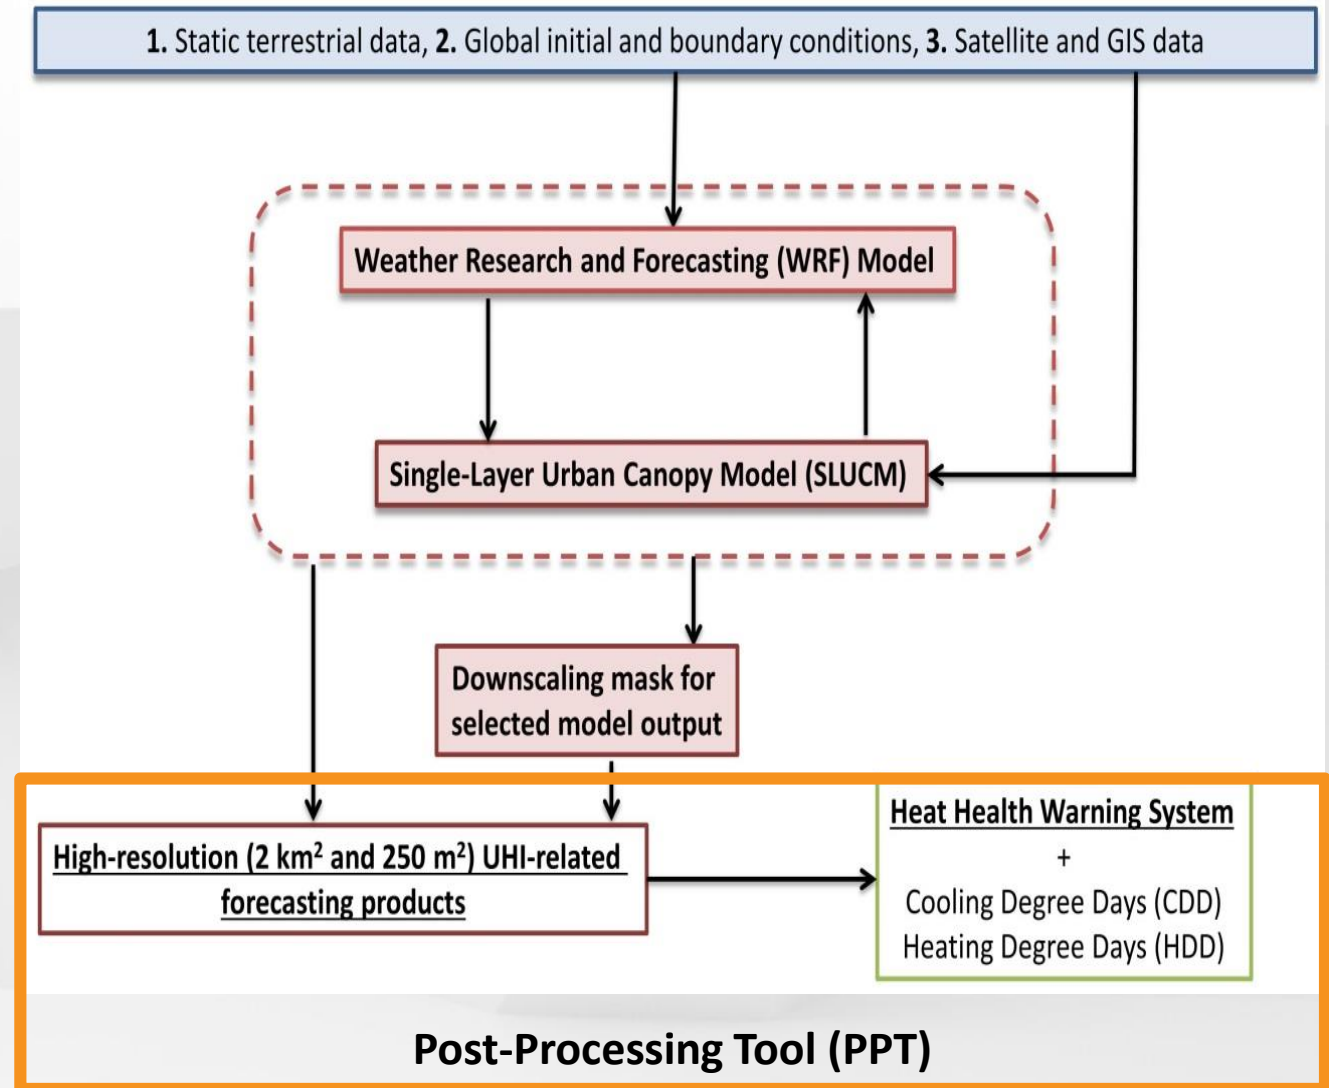

# Outline

- **Brief Description of the operational Urban Heat Island forecast system**
- **Recent example of application of the system**
- **Summary**

# General structure

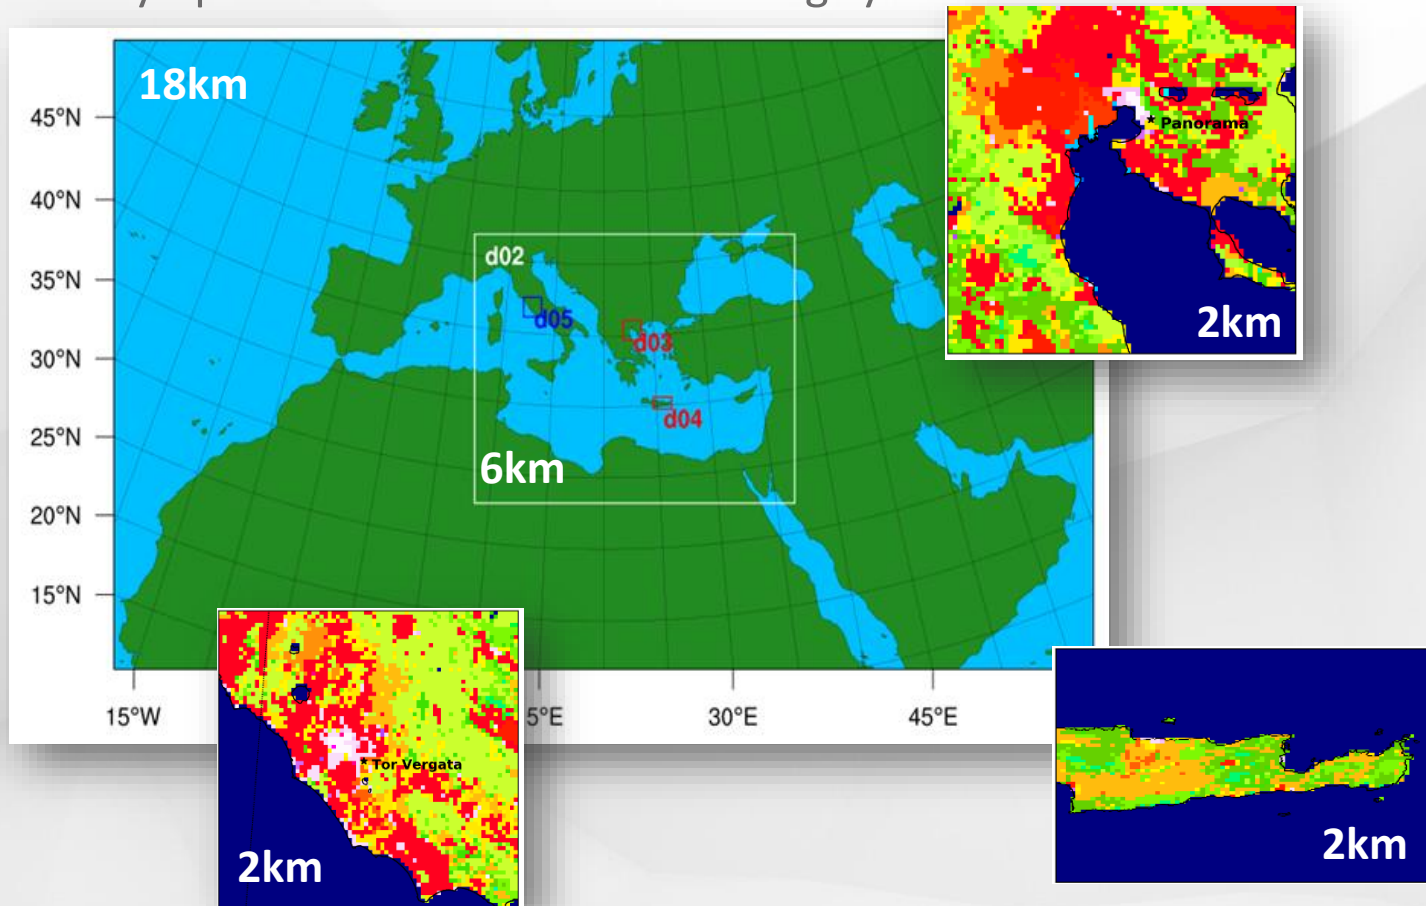

- Weather Research and Forecast system coupled with the Single Layer Urban Canopy Model SLUCM (WRF+SLUCM)

# Implementation of the UHI-FS modeling system

- Daily operation of the UHI forecasting system

## UHI-FS Products

- Meteorological
- Urban Heat Island
- Bioclimatic indices
- Energy-consumption related information

# Evaluation of UHI-FS

Thessaloniki

Table 2: Validation statistics for the chosen SVM models, with 2015 observational data.

| City         | Variable      | RMSE  | Bias  | MAE   | IOA  | Pearson Cor. |
|--------------|---------------|-------|-------|-------|------|--------------|
| Rome         | Rel. Humidity | 13.87 | -4.65 | 11.30 | 0.77 | 0.65         |

The project *Implementation of a forecAsting System for urban heat Island effect for the development of urban adaptation strategies - LIFE ASTI* has received funding from the LIFE Programme of the European Union.

# Future projections of climate and urban heat island

May 19<sup>th</sup>, 2022

**Dr. Stavros Keppas**

Aristotle University of Thessaloniki

School of Physics

Laboratory of Atmospheric Physics

The project *Implementation of a forecAsting System for urban heaT Island effect for the development of urban adaptation strategies - LIFE ASTI* has received funding from the LIFE Programme of the European Union.

# Increased Heat Stress in the cities - Reasons

## C4 Future climate impact assessment of UHI effect and assessment of adaptation plans

### > UHI Future Climate Assessment Report (UHI-FCAR)

- Study on the present and future climate of Thessaloniki and Rome
- Study on Urban Heat Island effect

### > UHI Adaptation Strategies Assessment Report (UHI-ASAR)

- Study on the impact of green interventions on the urban microclimate in the future

# Increased Heat Stress in the cities - Reasons

Increasing temperature in a global scale due to **green house gases emissions**

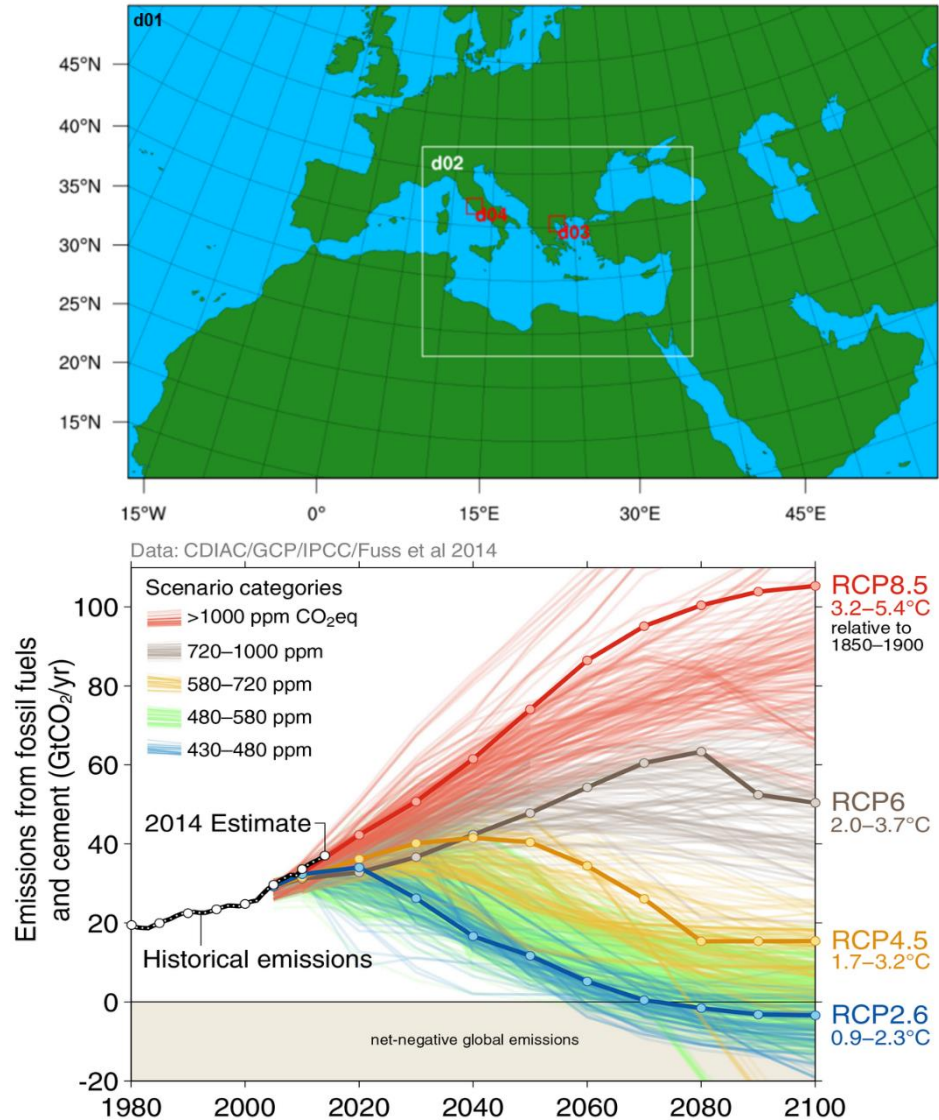

**Urban Heat Island (UHI)** effect occurs due to different land use and it describes the temperature difference between urban and surrounding non-urban areas:

$$UHI = T_{urban} - T_{non\_urban}$$

**The impact of UHI is added to the impact of global warming.**

# Model and Data

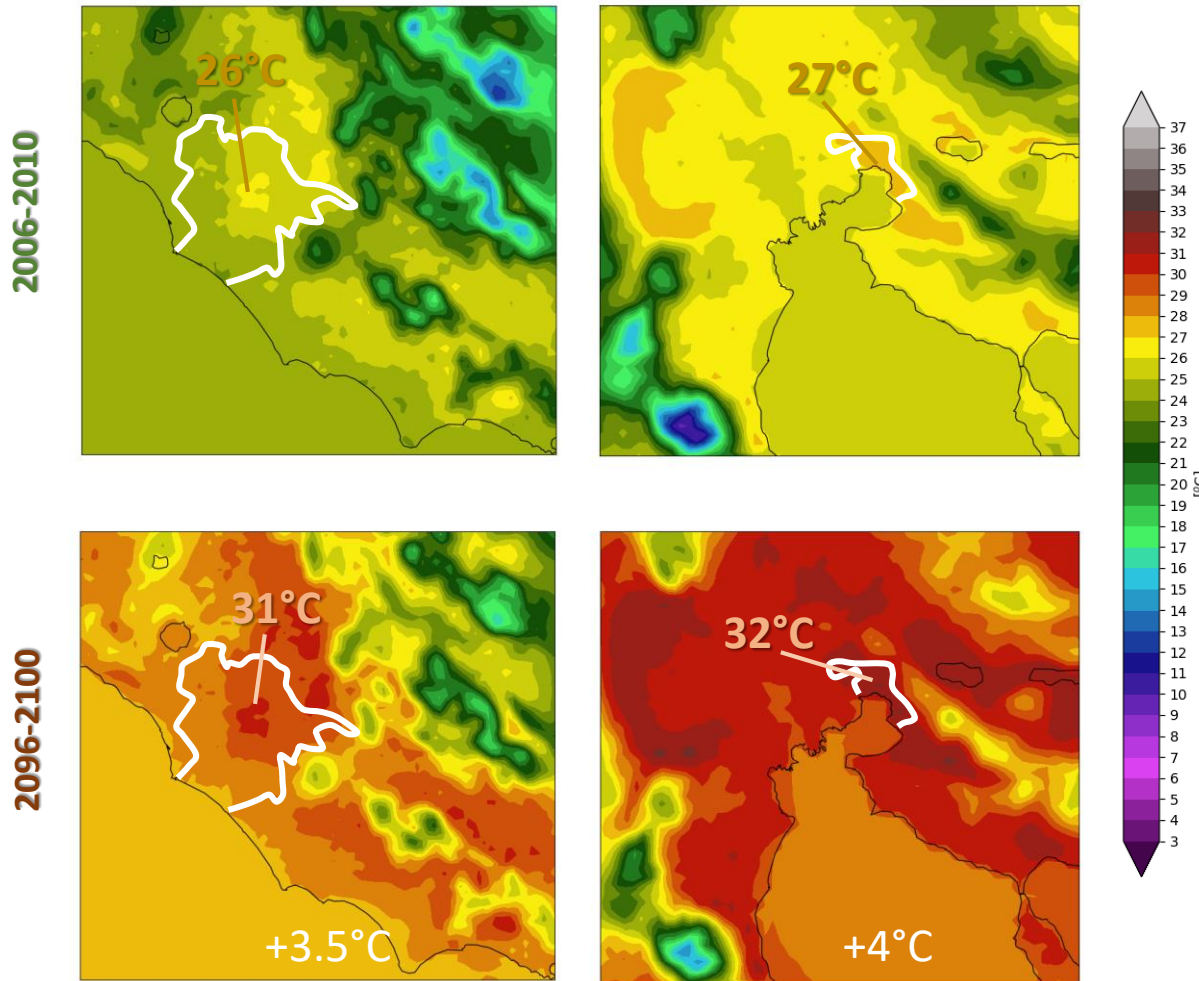

## Climate projections

- WRF as regional climate model
- CMIP-5 RCP8.5 (spatial resolution ~1°)
- High resolution dataset for Land Use (250m)
- Simulation periods: 2006–2010, 2046–2050, 2096–2100
- Spatial resolution: 50–10–**2km**
- Time resolution: 3 hours

# Temperature trends in the greater area of Thessaloniki

Average Summer Temperature (°C)

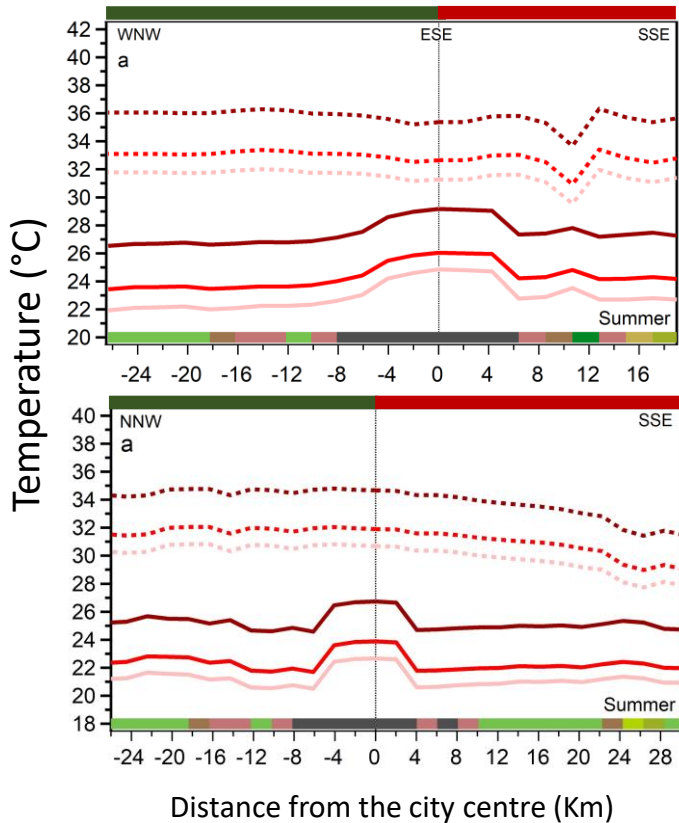

- Clear footprint of the urban areas of both cities on summer average temperature
- At the end of the century, we expect the highest temperature increase in summer by 3.5-4°C (and the lowest in winter)

# Difference between urban and non-urban areas

## Average $T_{min}$ and $T_{max}$ along the intersections

Keppas et al., 2021

## Present Climate

- UHI is obvious and intense on  $T_{min}$
- $T_{min}$  is higher by 2-3°C in the urban area
- UHI does not affect  $T_{max}$ , which may be in cases lower over urban areas (-1 to 0.4°C)

## Future Climate

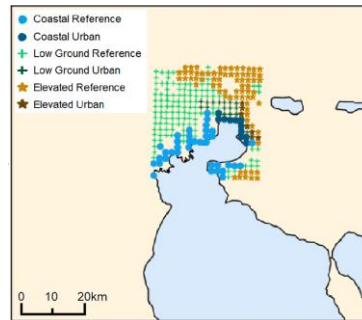

- UHI **remains constant** by 2100, but within a new temperature range causing increased discomfort in the urban area.

|                                                             | Now   | 2100    |
|-------------------------------------------------------------|-------|---------|
| <b>Thessaloniki</b> average summer temperature daily range: | 25-31 | 29-35°C |
| <b>Rome</b> average summer temperature daily range:         | 23-31 | 27-34°C |

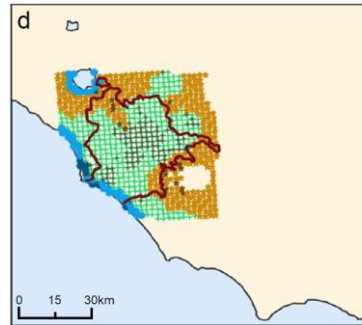

# Difference between urban and non-urban areas

Number of days per year with  $T_{\min} > 20^{\circ}\text{C}$

Thessaloniki

Rome

Discrimination between coastal, non-coastal low ground and elevated areas.

Results are similar for both cities

- Coastal urban areas are characterized by the largest number of days/year with  $T_{\min} > 20^{\circ}\text{C}$
- Coastal urban areas present the largest increase in the number of such days in the future.
- No significant differences are expected between non-coastal low ground and elevated areas.

# Impact of green interventions on the urban microclimate

# Motivations and goals for installing new atmospheric monitoring stations

## Motivations

## Goals

- UHI is strongly related to health, economic and environmental issues and can affect everyday activities
  - Satellite measurements do not provide UHI measurements – they provide SUHI measurements
  - Deploy and maintain observational networks is still a challenge
- Provide high quality measurements
  - Cover a city with a high spatial and temporal resolution
  - Merge local existing citizen's meteorological stations in a single, synergistic network

# Potential of the network - METEOROLOGY

- Urban - Suburban meteo-micrometeorological characterization
- Validation of the urban module of WRF model
- Mitigating effect of mesoscale circulation
- Mechanisms generating the urban heat island
- Effect of heat waves on the city
- Accuracy of satellite remote sensing techniques

# Observation System Overview

8 new Davis Vantage Pro  
2™ Wireless Weather  
Stations

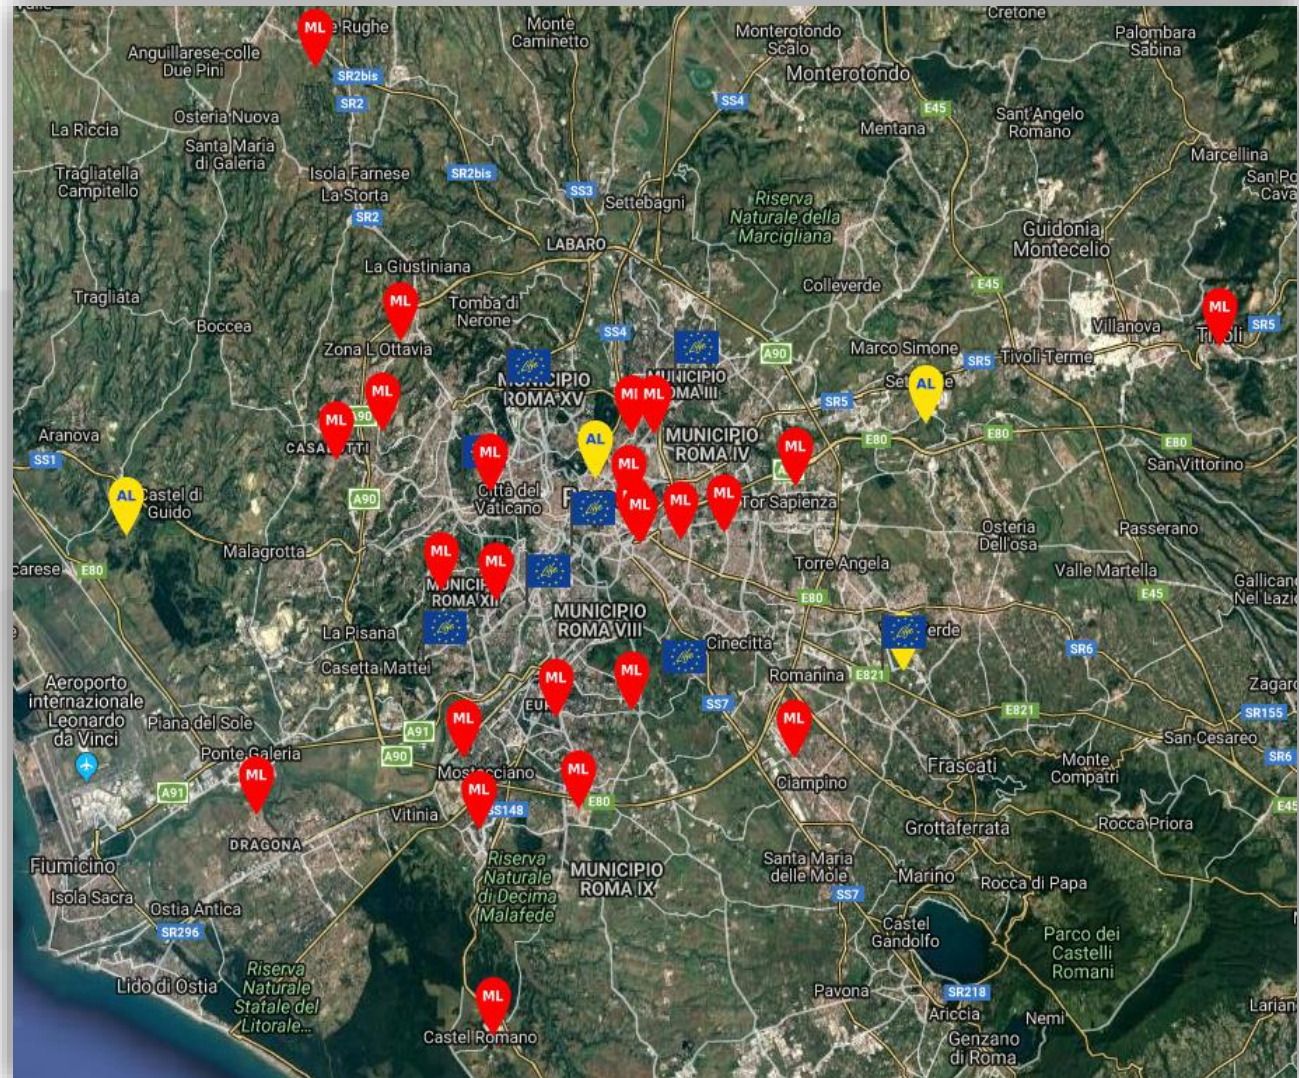

Meteo Lazio (25)

Arpa Lazio (4)

37 weather stations

# Weather stations

Davis weather stations, installed at schools, public institutions, and private people's buildings.

# HHWW predictive model definition

The tappmax threshold model is defined on the basis of the relationship between mortality and Tappmax investigated through a city-specific Poisson regression model

$$\log[E(Y_i)] = \alpha + tappmax_i * month_i + consecutive\_days_i$$

The explicative variables included in the model are:

- holidays, month (May–August),
- interaction between Tappmax and month
- number of consecutive hot days with Tappmax above the threshold (defined as the mean temperature value corresponding to all days for which excess mortality was greater than 10%)

# ROME HHWW model Definition of Risk Levels

For each month, a health-risk table were drawn up and a daily level of risk attributed:

- No risk:** increase in mortality <10%
- low risk:** increase in mortality between 10-20
- high Risk:** increase in mortality between >20%

The increase in mortality is defined as the difference between observed and baseline mortality.

## Rome

| month | tappmax | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|-------|---------|---|---|---|---|---|---|---|---|
| 5     | 29      |   |   |   |   |   |   |   |   |
| 5     | 30      |   |   |   |   |   |   |   |   |
| 6     | 31      |   |   |   |   |   |   |   |   |
| 6     | 32      |   |   |   |   |   |   |   |   |
| 6     | 33      |   |   |   |   |   |   |   |   |
| 6     | 34      |   |   |   |   |   |   |   |   |
| 6     | 35      |   |   |   |   |   |   |   |   |
| 7     | 33      |   |   |   |   |   |   |   |   |
| 7     | 34      |   |   |   |   |   |   |   |   |
| 7     | 35      |   |   |   |   |   |   |   |   |

## SUMMER HEAT WAVES AND COVID-19

Extreme heat can affect your health

### SHORT-TERM EFFECTS OF HEAT ON HEALTH

**DIRECT EFFECTS**

- Dehydration
- Electrolytes imbalance
- Heat rash
- Heat cramps
- Heat edema, syncope
- Heat stroke

**INDIRECT EFFECTS**

- Stroke
- Asthma, COPD
- reacutizations, Respiratory, infections
- Acute myocardial infarction
- Arrhythmias
- Diabetic hypoglycemia
- Renal failure

**SPECIFICALLY**

- Elderly
- People with chronic conditions (cardio-respiratory disease, diabetes and kidney disease) are more vulnerable to both the effects of heat and to Covid-19 complications.

### HOW TO PROTECT YOURSELF

**Keep cool and hydrated.**  
Wear light clothing, take cool showers or baths and drink water regularly.

**Stay out of the heat.**  
Go out in the coolest hours of the day and respect physical distancing and protection where required.

**Keep the household cool and ventilated.**  
Close blinds, shutters or curtains to keep out direct sunlight. Move into cooler rooms of the house.

**If you have heat-related symptoms.**  
(heat cramps, dizzy, headache, thirst) seek help, move to a cool place and hydrate.

**Protect yourself from covid-19.**  
Wash your hands regularly, cough into your arm and do not touch your face. When you go out respect physical distancing and follow guidance measures in place. If you fever or symptoms that may be due to Covid-19 stay at home and avoid contact with others, if symptoms persist worsen consult your doctor or health services.

## Urban Heat Island Forecasting System

The LIFE ASTI project focuses on the Urban Heat Island effect and human health by using a system of numerical models that lead to the short-term forecast and future projection of the UHI phenomenon in three Mediterranean cities: Thessaloniki, Rome and Heraklion. The LIFE ASTI model system produces high-quality forecasting products, such as bioclimatic indicators and heating and cooling degree days to assess the energy needs of buildings.

# The LIFE ASTI platform

## Objectives

- To inform **citizens** and **Authorities** for **extreme heat events** as well as for the impacts of **Urban Heat Island**
- To disseminate complex scientific information like the outputs of mathematical weather forecasting models in a simple, user-friendly way

## Technologies

**Web technologies** based on **open standards** and **free / open-source** software

## Dissemination channels

- Web application
- Mobile application

# The LIFE ASTI web application

Presents the data from the forecasting models and the meteorological stations for 4 cities. The three pilot areas:

- Rome (IT)
- Thessaloniki (GR)
- Heraklion (GR)

- 
- Pavlos Melas (GR) – added recently

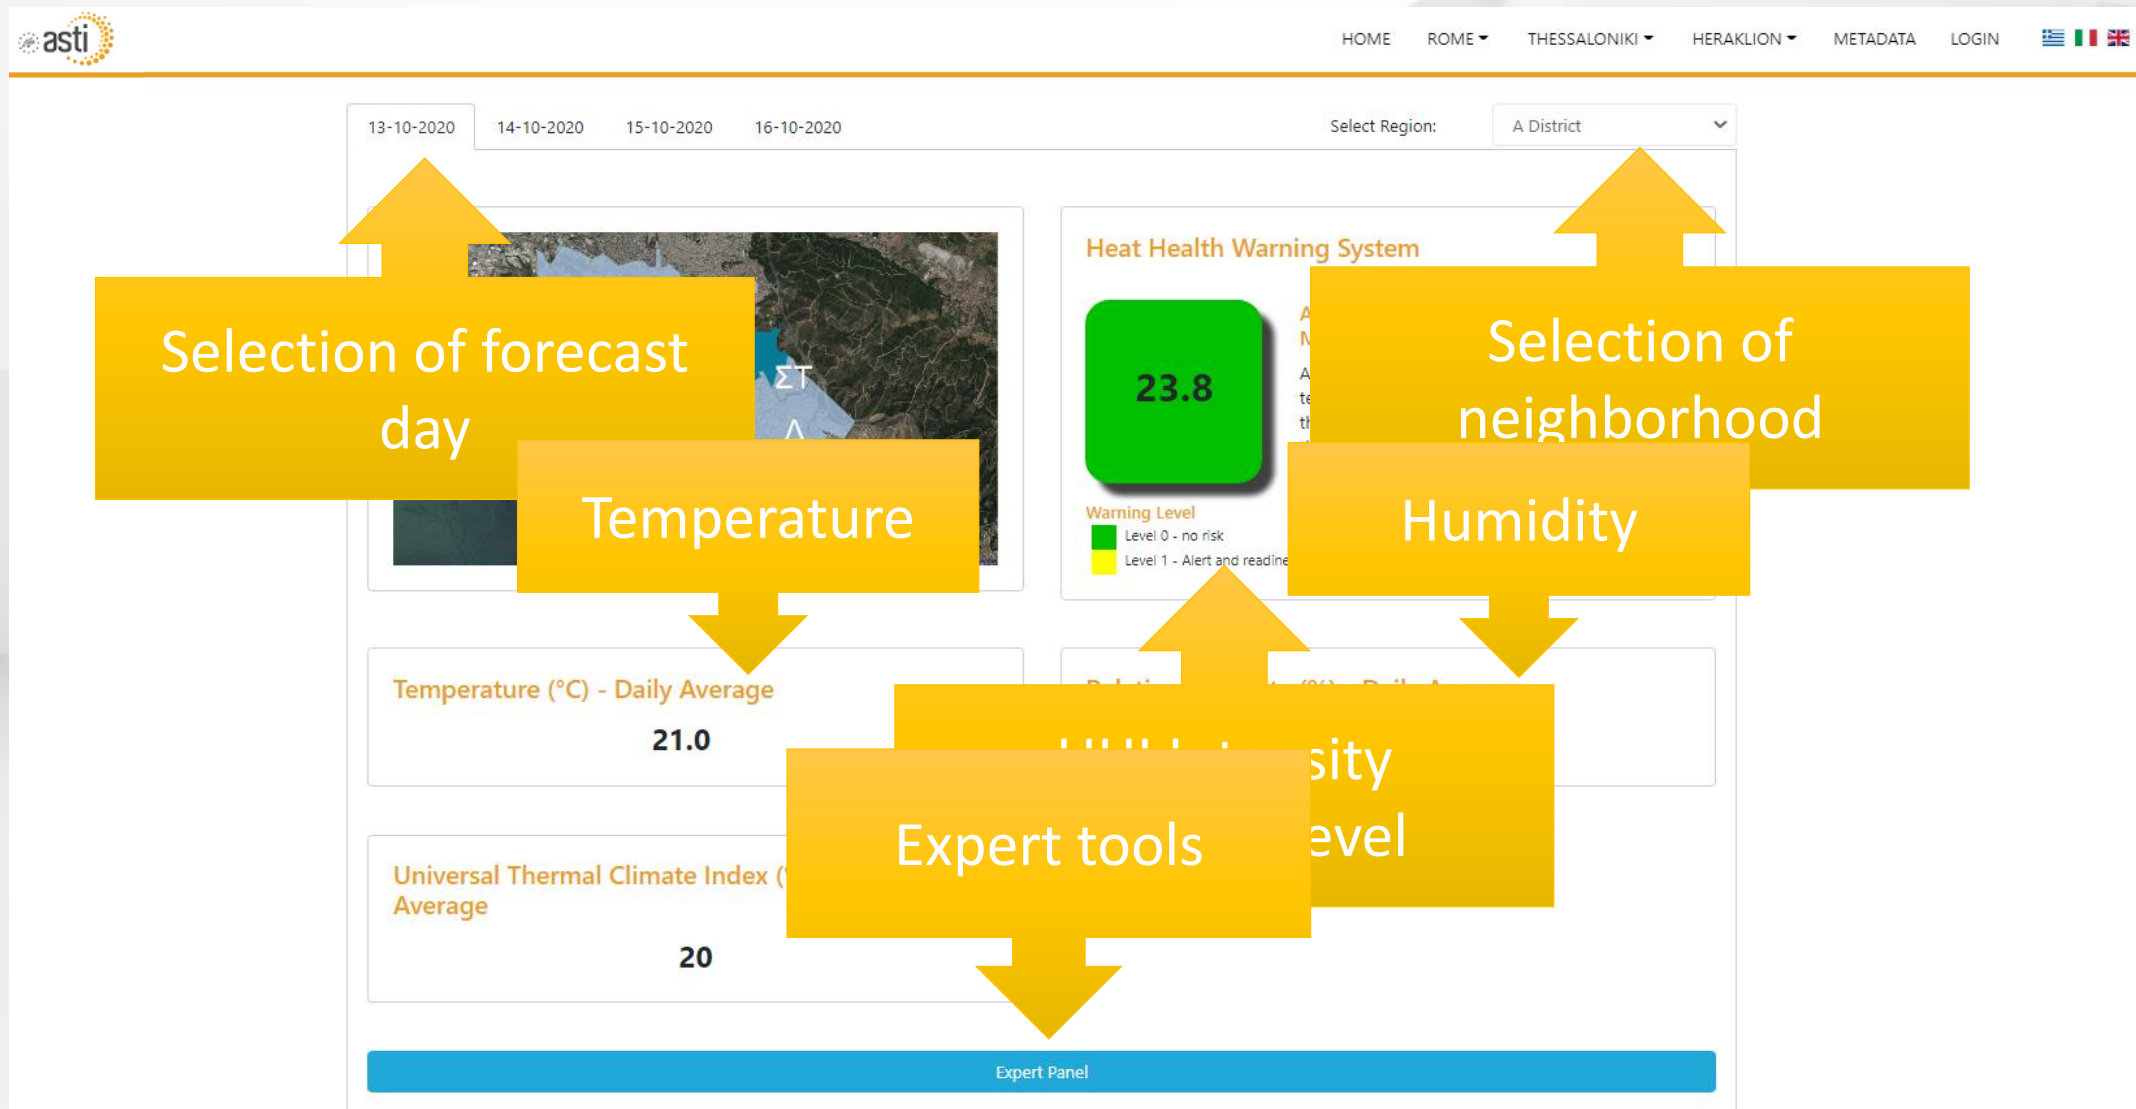

## Functionalities

- Overall presentation of UHI status in neighborhood level (**UHI dashboard**)
- Detailed presentation of UHI characteristics using graphs and maps (**expert panel**)
- Dynamic map for data visualization in city block level (**map view**)

<https://app.lifeasti.eu/>

# UHI Dashboard

Overall presentation of UHI status in city neighborhood level

The screenshot shows the UHI Dashboard interface with several key components and annotations:

- Navigation:** Includes the 'asti' logo, a menu with 'HOME', 'ROME', 'THESSALONIKI', 'HERAKLION', 'METADATA', and 'LOGIN', and flags for Greece, Italy, and the UK.
- Forecast Selection:** A date range selector at the top left shows dates from 13-10-2020 to 16-10-2020. An annotation 'Selection of forecast day' points to this area.
- Region Selection:** A dropdown menu labeled 'Select Region:' is set to 'A District'. An annotation 'Selection of neighborhood' points to this dropdown.
- Heat Health Warning System:** A central panel displays a temperature of 23.8 and a 'Warning Level' indicator. The indicator shows 'Level 0 - no risk' (green) and 'Level 1 - Alert and reading' (yellow). An annotation 'Humidity' points to this section.
- Temperature Data:** A panel shows 'Temperature (°C) - Daily Average' with a value of 21.0. An annotation 'Temperature' points to this panel.
- Humidity Data:** A panel shows 'Humidity (%) - Daily Average' with a value of 65. An annotation 'Humidity' points to this panel.
- Expert Tools:** A panel shows 'Universal Thermal Climate Index (Average)' with a value of 20. An annotation 'Expert tools' points to this panel.
- Expert Panel:** A blue bar at the bottom of the dashboard is labeled 'Expert Panel'.

# Expert Tools

Present the spatiotemporal variation of the UHI phenomenon using graphs and maps

## Apparent temperature (°C)

Interactive map showing the maximum value of apparent temperature index regardless of the time of occurrence of the maximum in each location. The map has been derived from the processing of the 24 hourly forecast maps derived from the meteorological model.

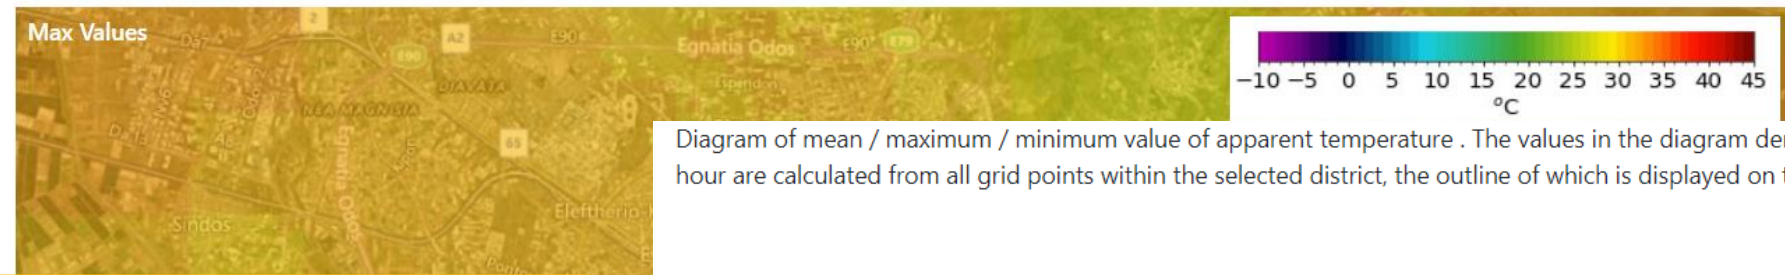

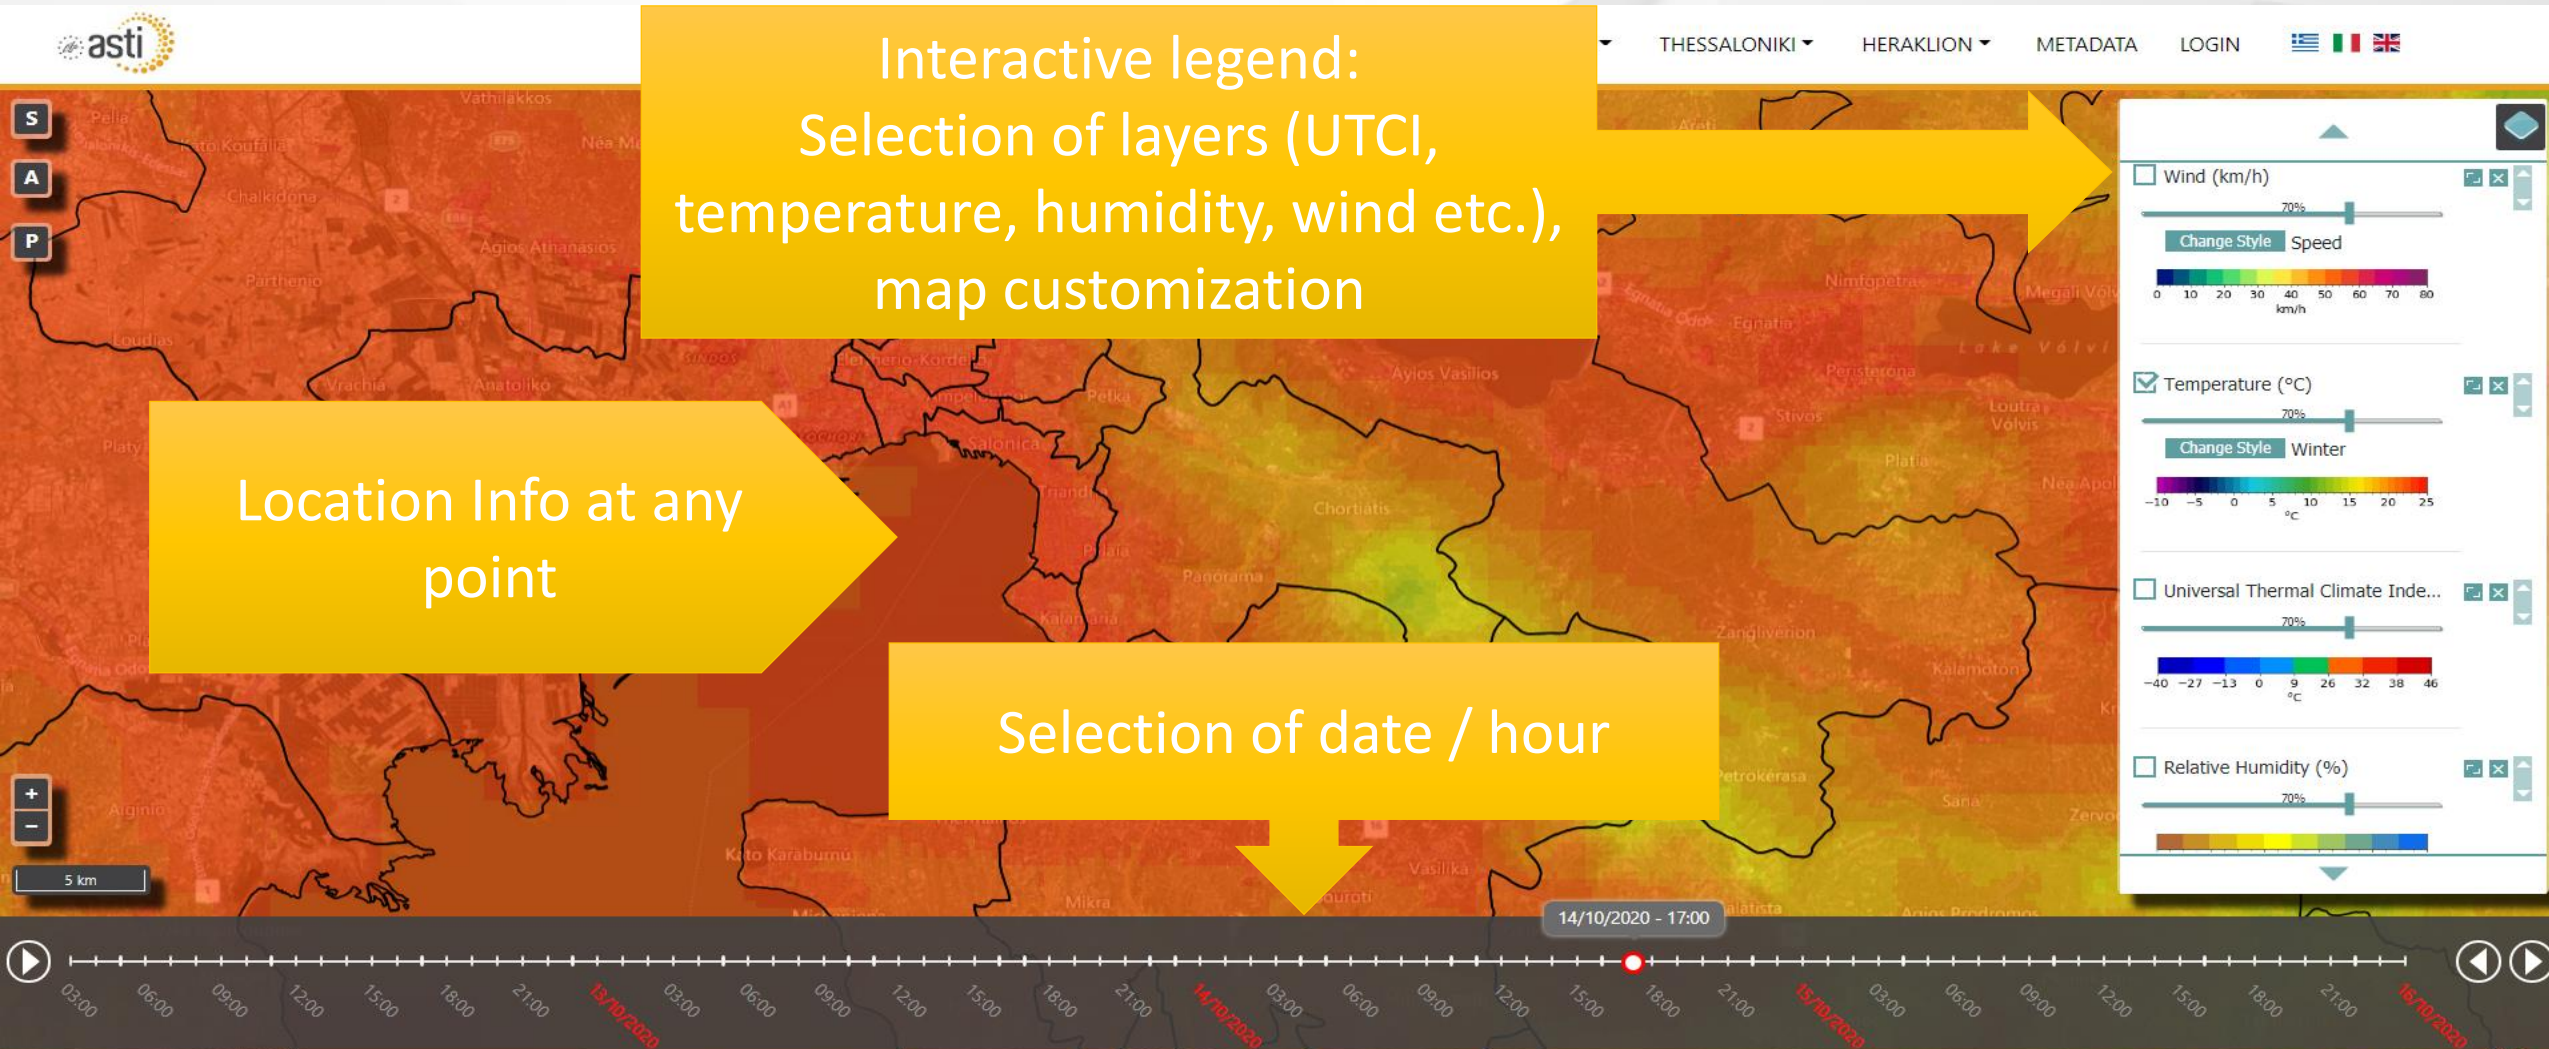

Diagram of mean / maximum / minimum value of apparent temperature . The values in the diagram derived and refer to the selected area of the city. The values for each hour are calculated from all grid points within the selected district, the outline of which is displayed on the map.

Diurnal variation graphs

# Dynamic map

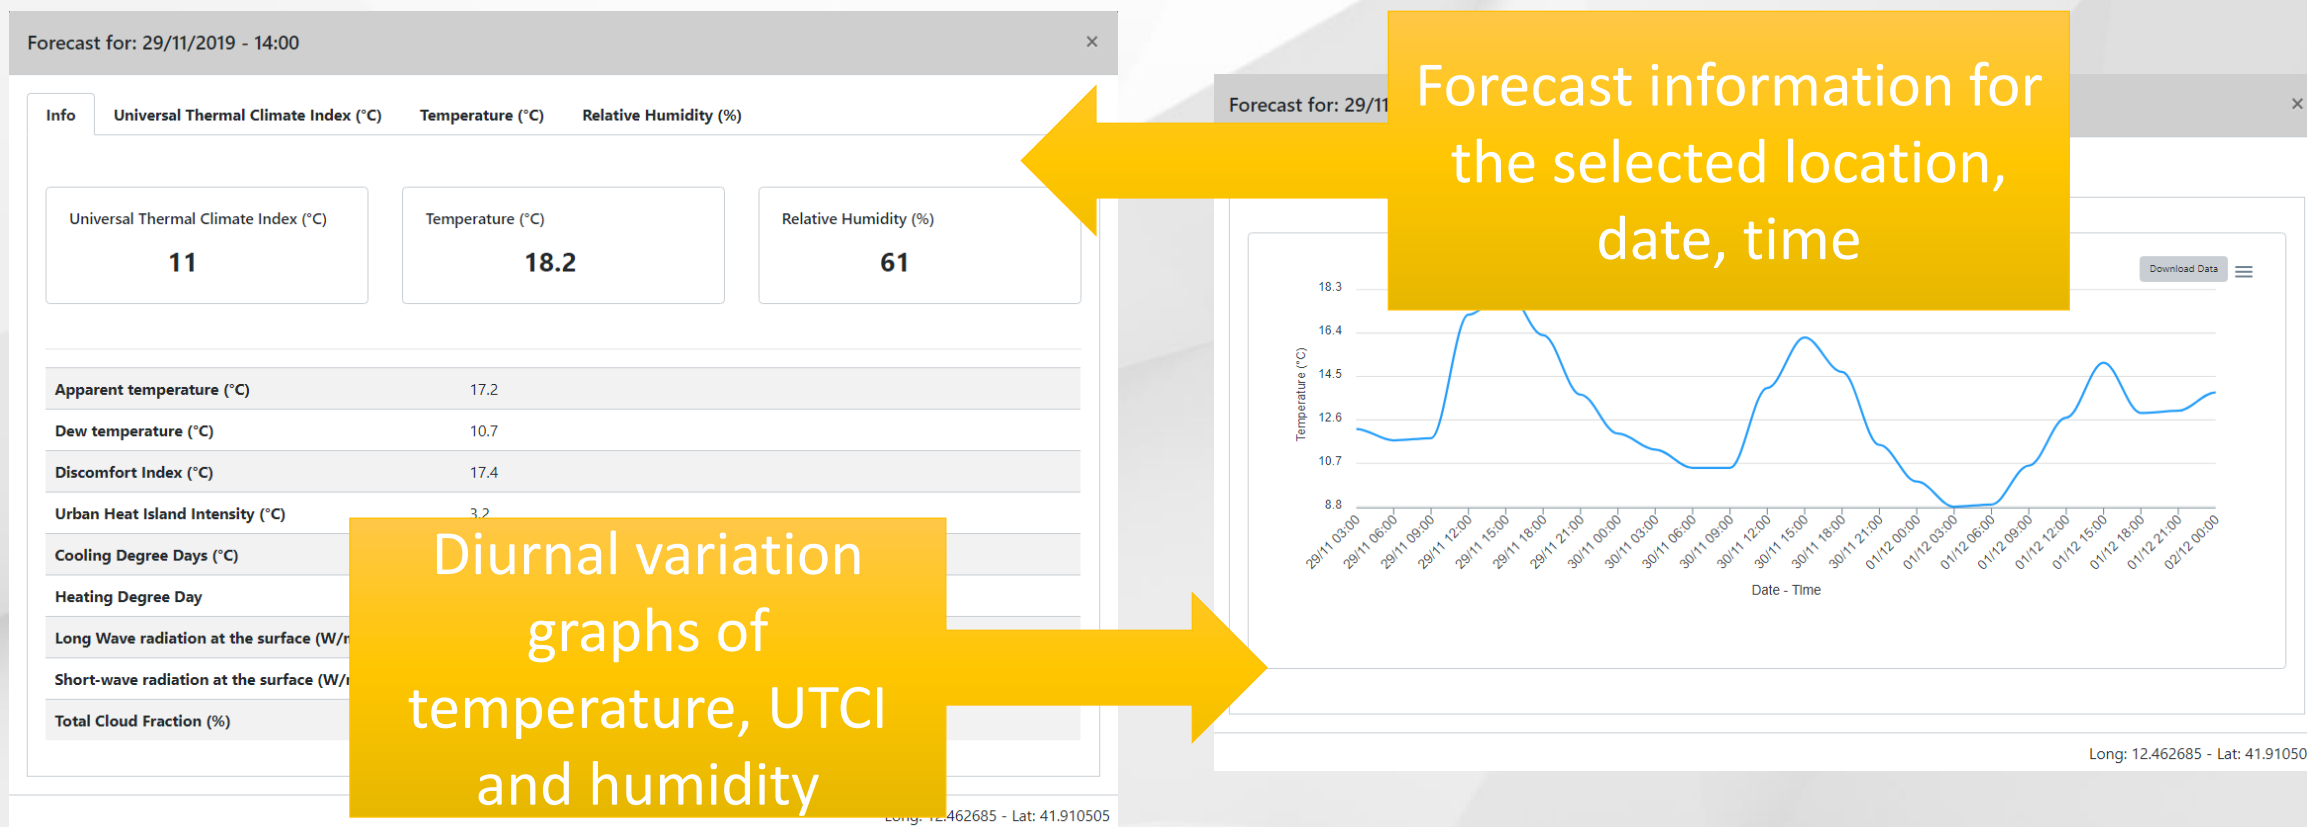

Dynamic map for data visualization in city block level

# Dynamic map

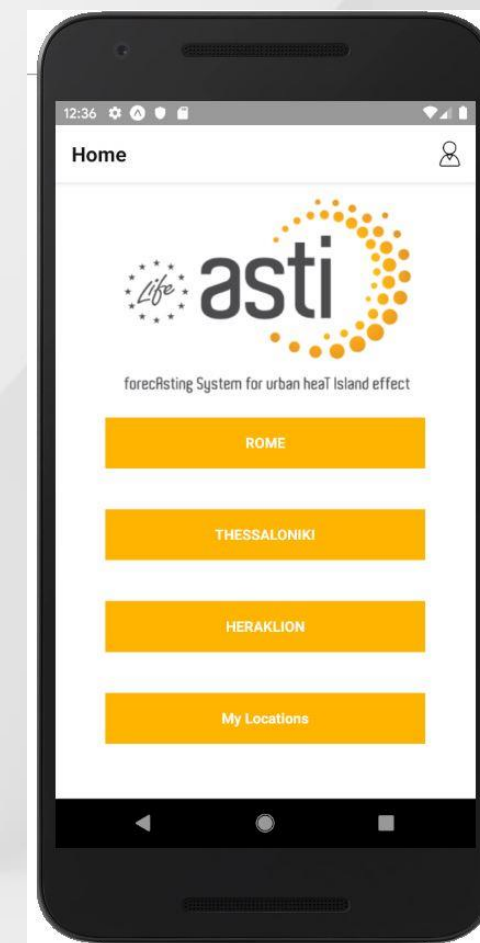

One click UHI information at city block level

# LIFE ASTI mobile app

Easy access to UHI information at city block level in your mobile

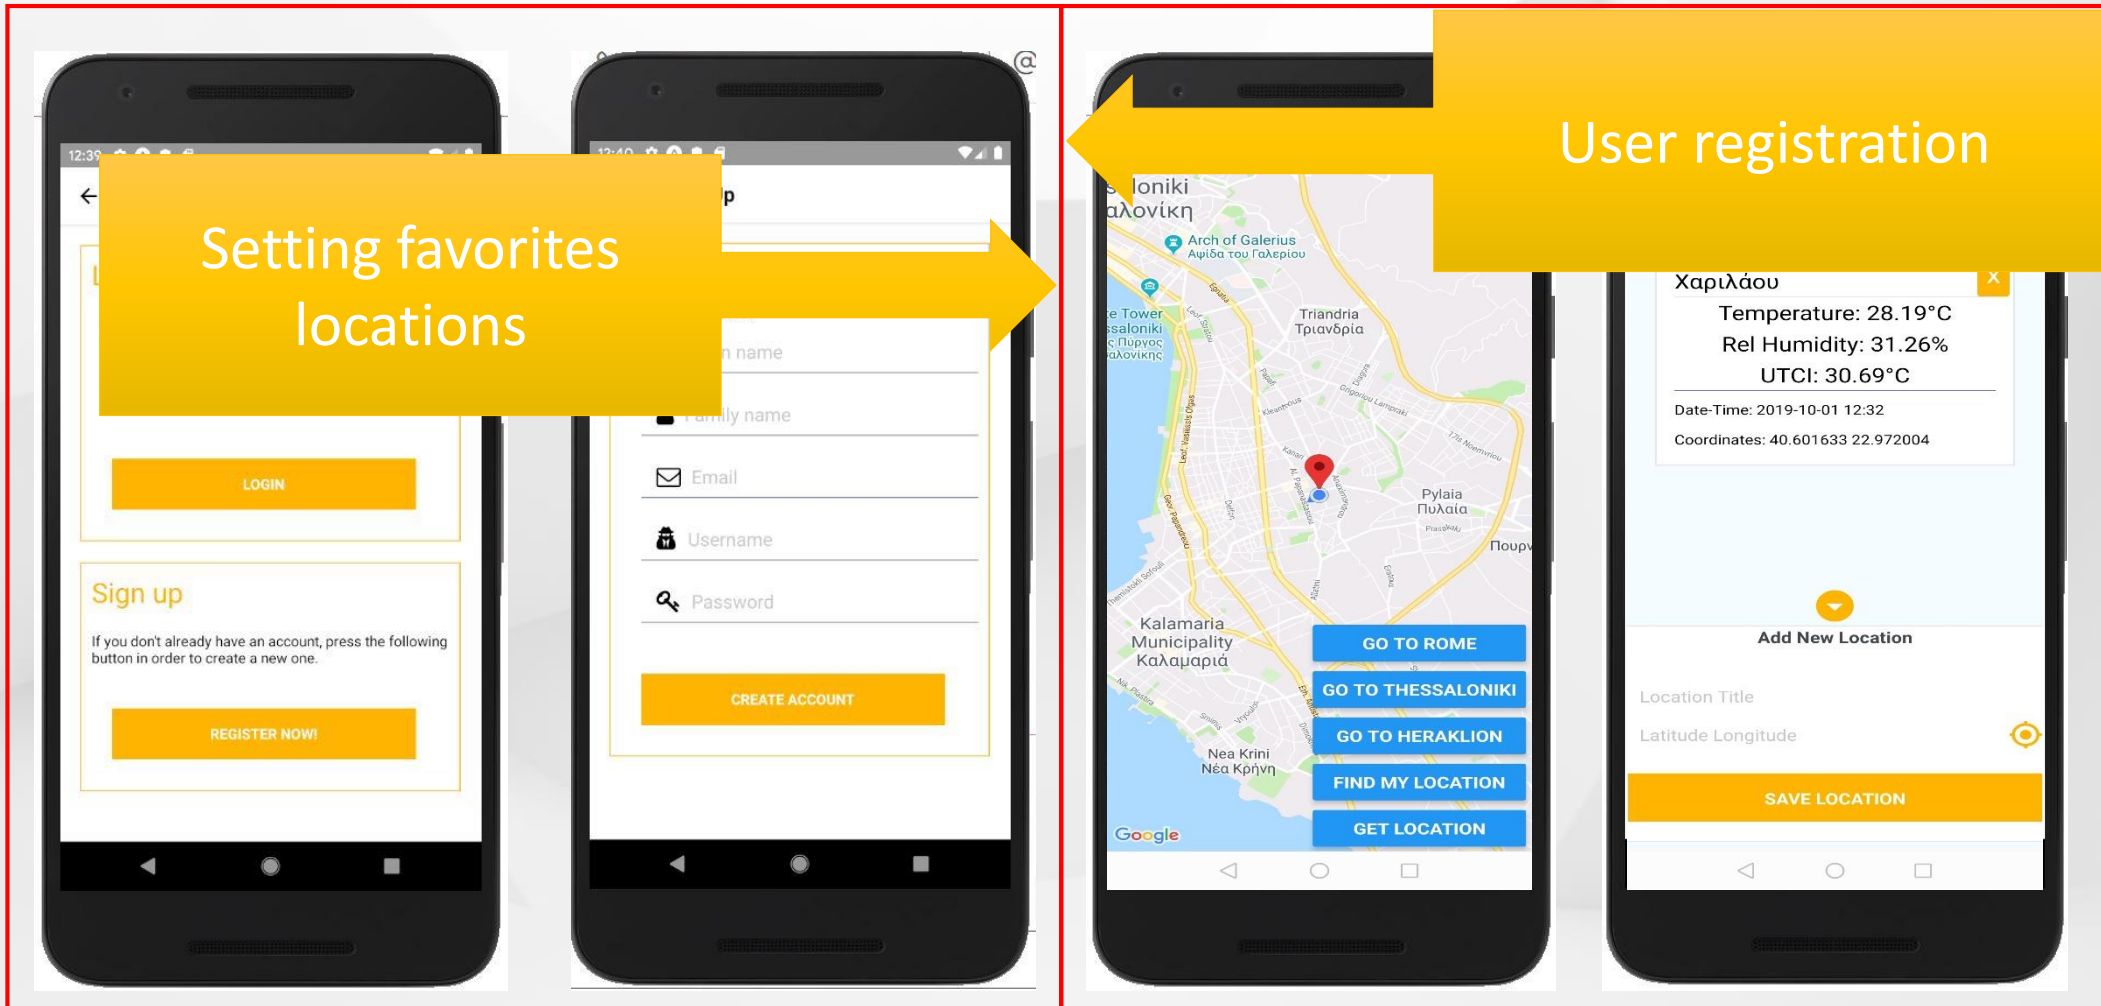

- Access to forecast data for all pilot areas
- UHI dashboard with simple to understand information
- Diurnal variation of the basic thermal related parameters
- Dynamic map of UHI products
- One click UHI information at city block scale
- Personalized information / alerts *for registered users*
- Custom locations *for registers users*

# LIFE ASTI Applications: Contribution to better-informed decision making

The LIFE ASTI forecasting platform serves as **short term adaptation tool** by providing the before mentioned information (for each involved city) in **high spatial resolution - city block level**.

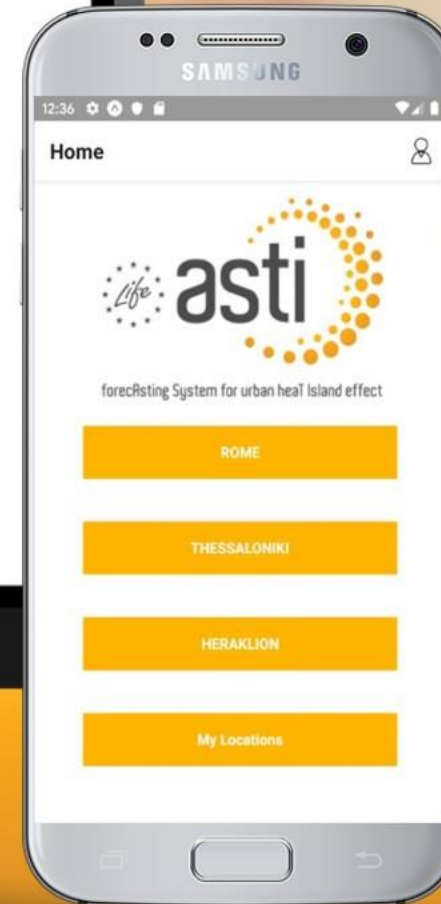

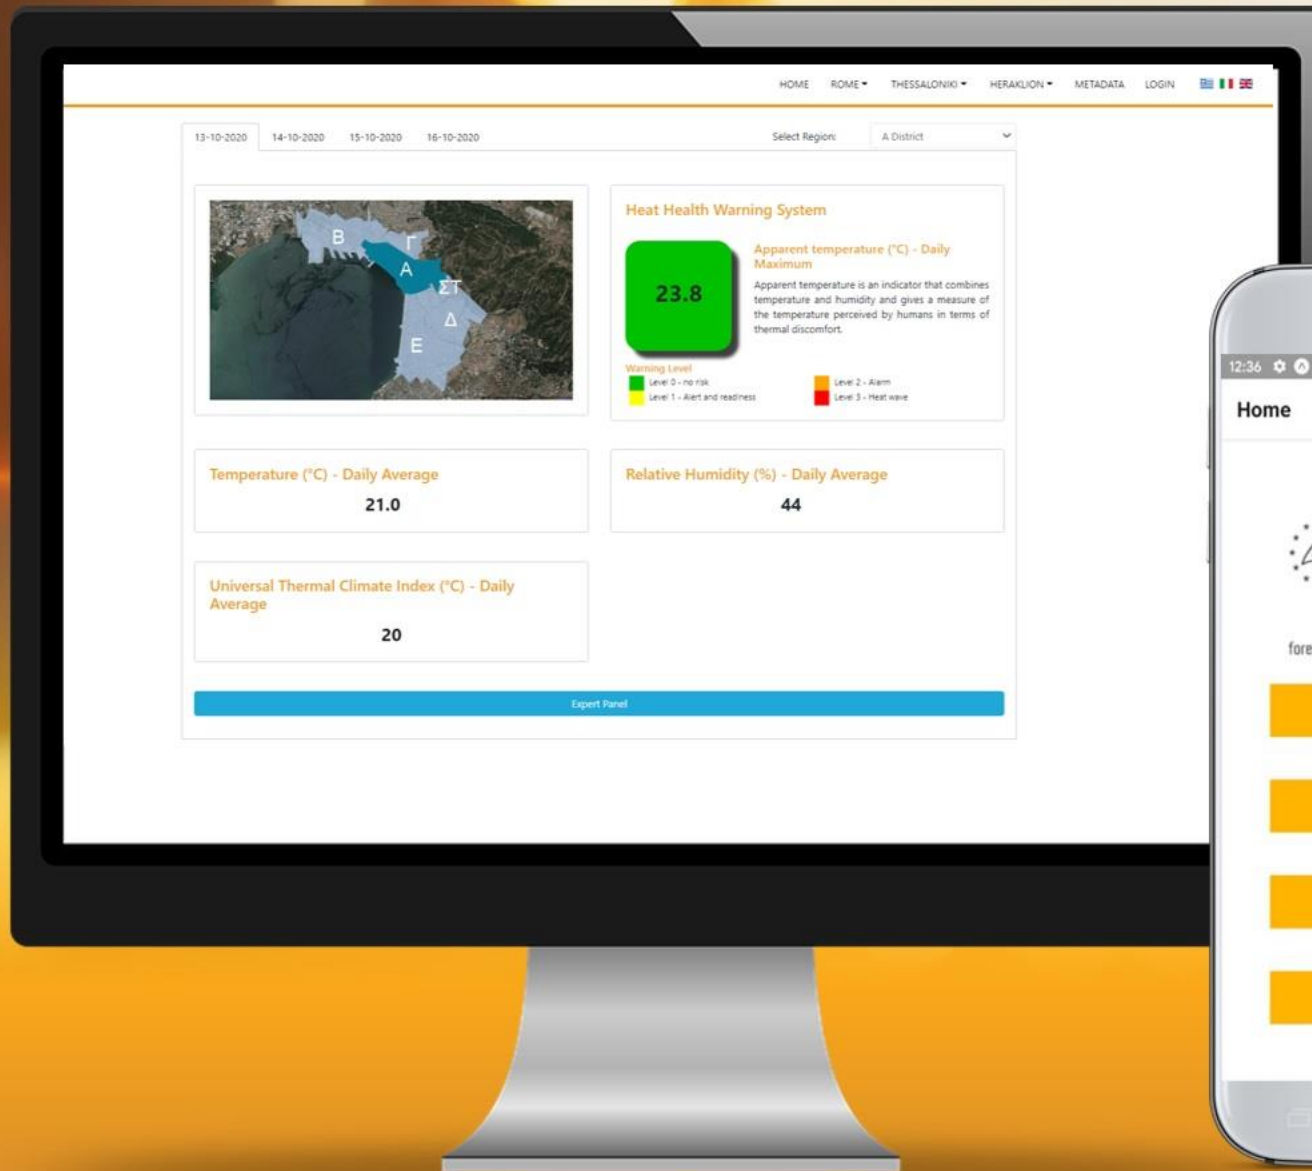

- **UHI-related forecasting products** combined with **Heat Health Warning Systems** contribute to better-informed decision-making for the **prevention and the protection of the general public**
- the prediction of **Heating/Cooling Degree Days HDD/CDD** assists in energy demand monitoring and control of power consumption in line with the “Covenant Of Mayors” initiative.
- the combination with the climate change impact assessment of the UHI effect it helps in the assessment of the impact of mitigation strategies such as promoting green infrastructure.

# LIFE ASTI Applications: Contribution to better-informed decision making

The information provided by the LIFE ASTI forecasting platform (or each involved city) is in **high spatial resolution (city block level)**, which helps decision makers to better understand their own city and therefore design new instruction services and better urban climate adaptation plans for the protection of human health and local environment.

**LIFE ASTI's forecasting web platform is a powerful tool supporting local authorities to better-informed decision making in their effort to achieve and exceed the eu climate and energy targets, supporting the signatories' commitment to initiatives such as "Mayors Adapt" and "Covenant Of Mayors"**

The project *Implementation of a forecAsting System for urban heat Island effect for the development of urban adaptation strategies - LIFE ASTI* has received funding from the LIFE Programme of the European Union.

# LIFE ASTI – Implementation of a forecAsting System for urban heaT Island effect for the development of urban adaptation strategies

## FINAL CONFERENCE

Thessaloniki, 19<sup>th</sup> of May 2022

The project *Implementation of a forecAsting System for urban heaT Island effect for the development of urban adaptation strategies* - LIFE ASTI has received funding from the LIFE Programme of the European Union.

# “The contribution of the LIFE ASTI project to the Municipality’s future planning”

Dr. G. Papastergios,  
Municipality of Thessaloniki

Thessaloniki, 19<sup>th</sup> of May 2022

# Contents

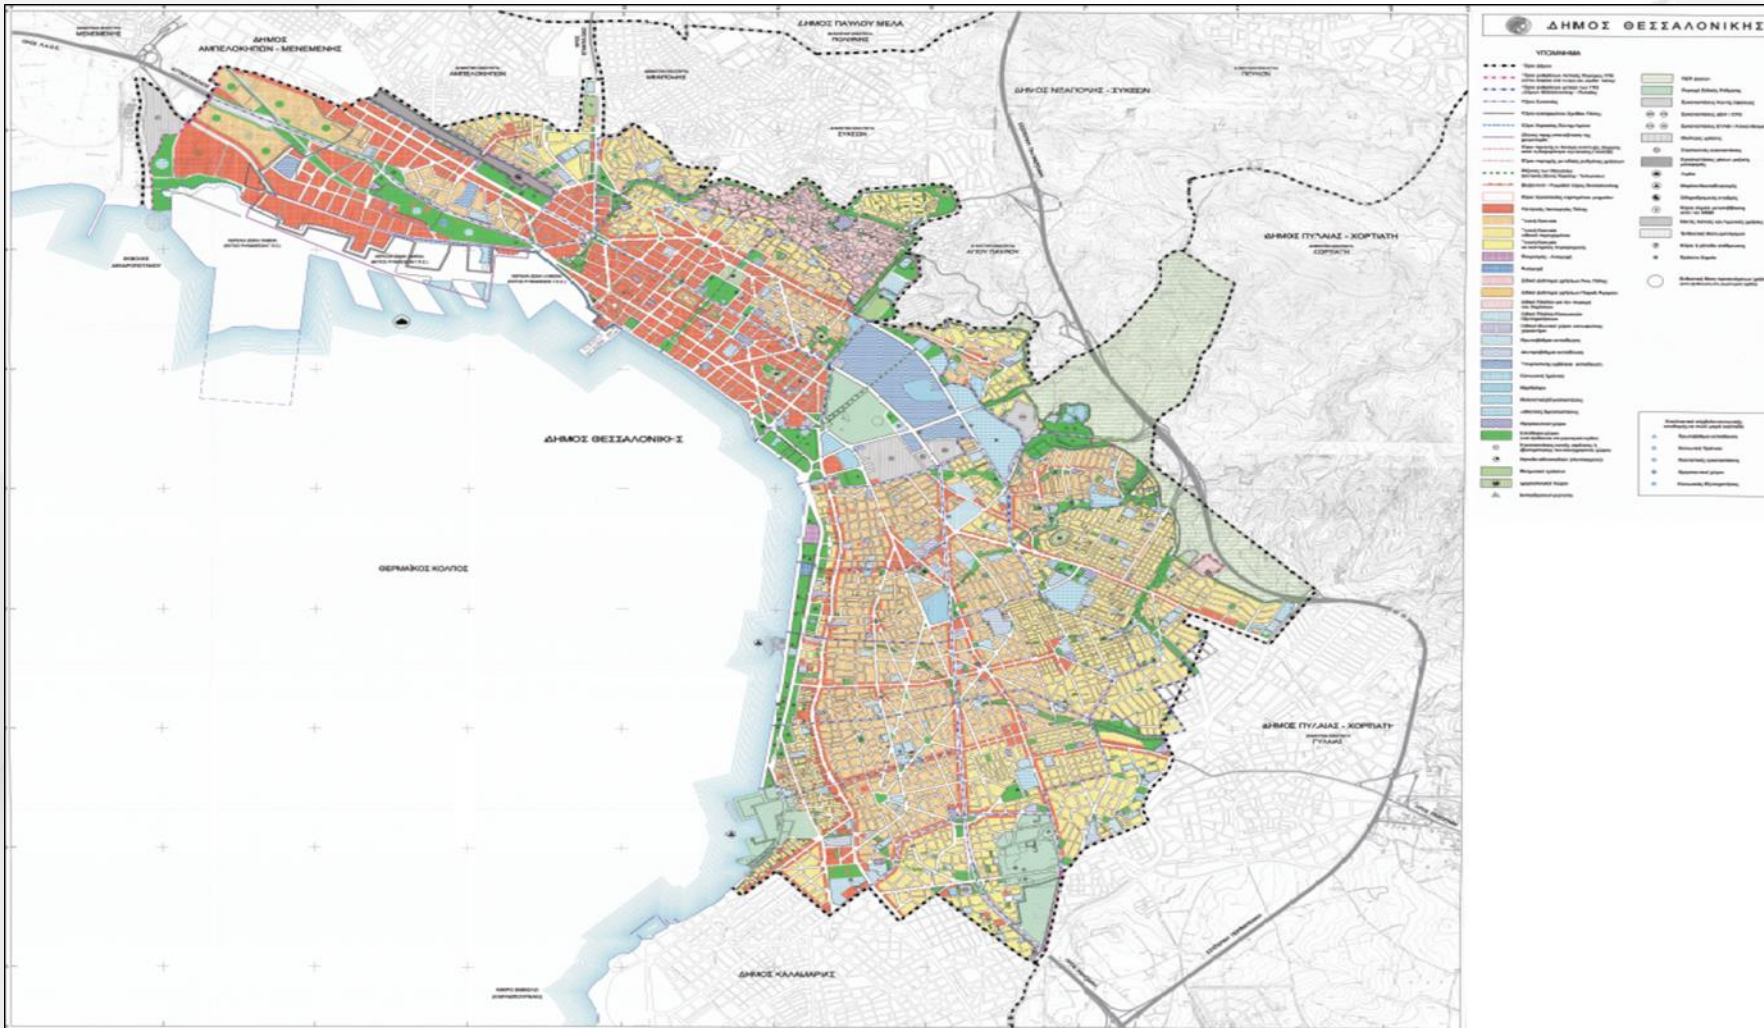

- Current situation analysis
- LIFE ASTI Action Plan's measures
- The contribution of the LIFE ASTI project to the Municipality's future planning
  - To the Operational Plan of the Municipality
  - To the Resilience Strategy of Thessaloniki
  - To the Covenant of Mayors for Climate and Energy and the SECAP's eventual implementation (plus...**EU Mission: 100 Climate-Neutral and Smart Cities**)

# The Municipality of Thessaloniki

## Current situation

- MoT: 325.182 inhabitants in 2011
- R.U. of Thessaloniki: 1.110.551 inhabitants

(source: General Urban Plan, 2019)

# The Municipality of Thessaloniki - Buildings

## Construction period

- Only 17% is 30 years old or younger (after 1990)
- 83% is at least 30 years old
- 40% was build before 1970
  
- Double glazing: 42.0%
- Exterior wall insulation: 6.6%
- Two or more types of insulation: 9.3%
- **No insulation at all: 42.2%**

## Insulation type

- Double glazing
- Exterior wall insulation / Other type of insulation
- Two or more types of insulation
- No insulation at all

# Action Plan for the adaptation of the city of Thessaloniki to the UHI effect - advantages

## Social strengths

- Reduction of related diseases and deaths
- Creation and development of a new local identity
- Mental well-being
- Reconnection with nature
- Reduction of sun exposure
- Heat-resistant housing even for the financially weakest

## Environmental strengths

- Reduction of atmospheric pollution
- More resilient urban ecosystem
- Better absorption of water - drainage

## Economic strengths

- Region's upgrading due to the green spaces and the adaptation to the UHI phenomenon
- Possible avoidance of maintenance costs
- Reduction of public health costs
- Enhancement of the city's positive image
- Increase of employees' productivity

(source: own elaboration based on the "Moreland City Council. (2016). Moreland Urban Heat Island

Effect Action Plan 2016/2017 – 2025/2026.

[https://www.moreland.vic.gov.au/globalassets/areas/esd/esd-uhie-urban-heat-island-effect---action-](https://www.moreland.vic.gov.au/globalassets/areas/esd/esd-uhie-urban-heat-island-effect---action-plan---final-draft-for-council-june-2016.pdf)

[plan---final-draft-for-council-june-2016.pdf](https://www.moreland.vic.gov.au/globalassets/areas/esd/esd-uhie-urban-heat-island-effect---action-plan---final-draft-for-council-june-2016.pdf) )

# The Action Plan is developed around 4 main axes

Adaptation measures – 4 scenarios with regard to the level of preparedness and considering the relevant needs

- **Axis 1: Prevent the UHI effect's influence on human health** through the deterrence of the effects of a heat wave (it should be constantly implemented from alert level 1 and intensified and monitored towards level 4).
- **Axis 2: Protect the population by implementing appropriate management measures** per meteorological vigilance level as provided to the municipality by LIFE ASTI's **Heat Health Warning System** (HHWS) or the national relevant service and, of course, considering the data of the municipality's meteorological stations (it should be constantly implemented from alert level 1 to 4).
- **Axis 3: Inform and communicate** (the preparation of the informative material should be carried out in alert levels 1-2, while their dissemination should start from level 2 and intensified onwards to level 4).
- **Axis 4: Capitalize on the Region's experience** (after taking action at level 4).

# Heat Health Warning System (HHWS)

## Δελτίο θερμοκρασιών και προειδοποίησης κινδύνου για την ανθρώπινη υγεία

(<https://app.lifeasti.eu/>)

### 2021-09-17: Επίπεδο 2 - Προειδοποίηση κινδύνου

Η θερμοκρασία στο κέντρο της Θεσσαλονίκης θα κυμανθεί από 20.3 έως 32.2°C, ενώ στα ενδότερα τμήματα του αστικού ιστού θα φτάσει και τους 32.6°C. Το επίπεδο προειδοποίησης κινδύνου για την ανθρώπινη υγεία είναι στο επίπεδο 2<sup>ο</sup>.

Αναλυτικά σε κάθε δημοτικό διαμέρισμα η θερμοκρασία θα κυμανθεί:

| Περιοχή       | Ελάχιστη | Μέση   | Μέγιστη |
|---------------|----------|--------|---------|
| Α' Διαμέρισμα | 20.3°C   | 25.9°C | 32.2°C  |

## Δελτίο θερμοκρασιών και προειδοποίησης κινδύνου για την ανθρώπινη υγεία για την περίοδο 17 έως 20/9/2021- LIFE ASTI

17/09/2021 10:15

Στο πλαίσιο ενημέρωσης των δημοτών και επισκεπτών της πόλης, αλλά και της υλοποίησης του ευρωπαϊκού έργου LIFE ASTI, μπορείτε να βρείτε **εδώ** το **Δελτίο Θερμοκρασιών και Προειδοποίησης Κινδύνου για την Ανθρώπινη Υγεία**, για τον Δήμο Θεσσαλονίκης, που εκδόθηκε από το Προγνωστικό Σύστημα Αστικής Θερμικής Ησίδας του έργου, για τη χρονική περίοδο 17/09/2021 έως 20/09/2021.

Περισσότερες πληροφορίες για το έργο LIFE ASTI μπορείτε να βρείτε στην επίσημη ιστοσελίδα του <https://lifeasti.eu/> και στα μέσα κοινωνικής δικτύωσης (Facebook, Twitter, Instagram, LinkedIn, Youtube).

# Action Plan's recommendations: more green

- ✓ **Development of the urban green** at least by 30% in combination with the reinforcement of the sub-urban green parks and forests.
- ✓ **identification of the vacant spaces, public spaces and buildings** that can be potentially turned into green areas, the studies for their regeneration and efforts carried out under the aim of their inclusion to identified funded programmes.
- ✓ **Organisation of seminars**, eventually carried out by the municipality may also help both public and private initiatives.
- ✓ Several initiatives to **mobilize the private sector** should also be foreseen either informative seminars or economic initiatives

# Action Plan's recommendations: more blue

- ✓ Development and maintenance of the “blue” element.

The image shows the blue roofing water-retention matting laid over the waterproofing membrane. Also in view are the inspection chambers to the drainage system

# Action Plan's recommendations: wise use of construction materials per case

# The Pillars of the OP of MoT – LIFE ASTI contribution

## Pillar 1: Environment and Quality of life

- Measure 1.7 **Increasing the resilience of MoT** against climate change
- Target 1.7.1 Mitigation actions against climate change

## Pillar 2: Society – Health – Education – Culture - Sports

- Measure 2.1 Health and social care
- Target 2.1.1 **Improving public health services**

## Pillar 3: Local Economy and Employment

- Measure 3.1 Mapping and rebooting of local financial activities
- Target 3.1.3 **Boosting local financial activities**

## Pillar 4: Administrative Capacity and Internal Development of the Municipality of Thessaloniki

- Measure 4.2 e-governance & improving citizen services
- Target 4.2.2 **Thessaloniki “Smart City”**

# LIFE ASTI Project's contribution – Resilience Strategy

the resilience strategy of Thessaloniki, in the framework of 100 resilient cities initiative

The Resilient Thessaloniki program and the strategy for urban resilience “Thessaloniki 2030”, has 4 pillars:

- the goal of shaping a sustainable city,
- the joint design of an open city,
- the creation of a dynamic local economy and an effective system of urban governance and
- the redefinition of the city's relation / bonding with the sea

The Strategy includes 30 Programs and over 100 Actions with multiple benefits for the resilience of the city and its population.

# LIFE ASTI Project's contribution – Covenant of Mayors

## Covenant of Mayors for Climate and Energy - Goals

*"We, Mayors from all over Europe, hereby step up our climate ambitions and commit to delivering action at the pace that science dictates, in a joint effort to keep global temperature rise below 1.5 °C - the highest ambition of the Paris Agreement.*

*Our vision is that, by 2050, we will all be living in decarbonised and resilient cities with access to affordable, secure and sustainable energy. As part of the Covenant of Mayors - Europe movement, we will continue to (1) reduce greenhouse gas emissions on our territory, (2) increase resilience and prepare for the adverse impacts of climate change, and (3) tackle energy poverty as one key action to ensure a just transition."*

Signatory cities pledge action to support implementation of the EU 55% greenhouse gas-reduction target by 2030 and the adoption of a joint approach to tackling mitigation and adaptation to climate change.

# LIFE ASTI Project's contribution – 100 CNC

## SELECTED CITIES

- 100 EU cities
- 12 cities from countries associated to Horizon Europe, the EU's research and innovation programme (2021-2027).

Cities from every  
Member State

Capital cities

Small, medium,  
large cities

Frontrunners and  
less prepared cities

## BENEFITS FOR CITIES

- **Tailor-made advice and assistance** from the Mission Platform (managed by the [NetZeroCities](#) consortium)
- Unlocking additional **funding and financing opportunities** through a Mission label
- **Research & innovation funding opportunities** for cities to join large innovation actions, pilot projects and demonstrations (total budget from Horizon Europe for 2021-2023 is €360 million)
- Support through a national **coordination network**
- Networking opportunities, **learning and exchange of experiences** among cities
- Support with **involving citizens in decision-making**
- **High visibility** – raised political profile and attractiveness for investment and skilled workers

# LIFE ASTI Project's contribution – Current & Future projects

## 5 new green spaces are created in the city

based on local bioclimatic characteristics in order to adapt to climate change impacts

## 2 pilot actions for 2 buildings

to decrease the energy consumption of 2 buildings in Thessaloniki and contribute to the reduction of energy demand and carbon emissions

**A** Center of Architecture      **L** Central Municipal Library

**118,000 KWh/year** energy saving

**33%** of the LIFE ASTI project target for reduction of energy consumption

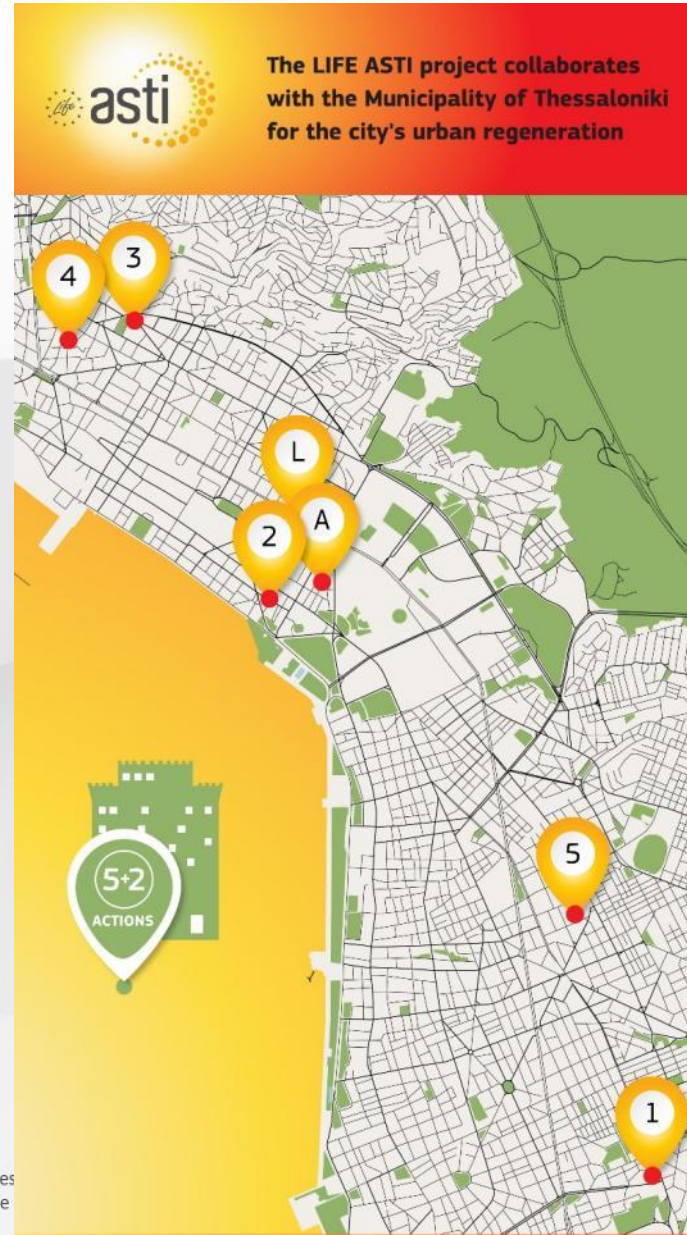

**166 tn/year** CO<sub>2</sub> saving

**83%** of the LIFE ASTI project target for reduction of CO<sub>2</sub> emissions

Project partners

[www.lifeasti.eu](http://www.lifeasti.eu)

Current & future projects:

- Energy upgrade of municipal buildings (i.e., Kleanthous, Mazaraki, Iktinou, Siggrou, Mitsaki, Olimpiados et. al.)
- Public space renovations (i.e. Aristotelous, Deck, et. al.)
- Vertical gardens
- Green roofs
- Energy communities

2007

2030

2050

1.4 million new people are moving into cities every week.

People are drawn to cities as centres of economic activity, social connection, opportunity, and innovation.

# GLOBAL TEMPERATURE IS STEADILY RISING.

TWENTY OF THE WARMEST YEARS HAVE OCCURRED SINCE 2000.

NASA's Goddard Institute for Space Studies (GISS)

#HEATSEASON

Atlantic Council

Adrienne Arsht-Rockefeller Foundation Resilience Center

# Cities & heat extremes

By the 2050s

Today 200 million city-dwellers in 350 cities face temperatures over 35°C (95°F).

By 2050 these cities will be 970 = Heatwaves will become far more intense

This means that 1.6 billion people living in close to 1,000 cities will face regular, extreme heatwaves in under 30 years' time.

This is more than 40 percent of [today's total urban population](#).

Heat affects workforce productivity. By 2030 annual global heat-related productivity losses could cost \$2 trillion.

**\$2 trillion** An illustration of a stack of green banknotes, representing the \$2 trillion in productivity losses.

# EXTREME HEAT IS DANGEROUS, AND IT'S ON THE RISE GLOBALLY.

IN RECENT YEARS, TEMPERATURES HAVE HIT RECORD  
HIGHS AND HAVE CAUSED THOUSANDS OF DEATHS.

# Athens Resilience Strategy for 2030

## Strategy hierarchy

The diagram illustrates and gives an overview of the pillars, goals, actions and supporting actions as well as highlights the Mega Resilience Projects included in this strategy.

The graphic adjacent to the goal represents the Resilience Value mapped on the CRF drivers.

The CRF acts as a lens to understand the complexity of city systems and the drivers that contribute to city resilience. The framework is made up of four main dimensions and 12 drivers that together illustrate what makes a resilient city.

Refer to page 17 for more information.

© Municipality of Athens

A.1

Climate change adaptation action plan

Description:

The City of Athens, recognizes that impacts of climate change will continue to affect the quality of life for its citizens. The city plans to implement measures that aim at increasing the city's resilience and protecting the citizens from the repercussions of increasing urban temperatures. Raising temperatures will also lead to a dramatic increase in energy consumption, and will intensify flash floods and poor air quality. city mayors have an important leadership role to play in climate change adaptation policy making. The City of Athens, in collaboration with C40 and the office of Resilience and Sustainability, has just finished drafting its Climate Change Adaptation Action plan (CAAP). This is a summary of all the related actions within this plan.

**Goal A**  
**Integrate natural systems into the urban fabric**

Resilience Value:

- Support data-driven policy making
- Enhance and promote communication channels with the citizens
- Support transparency and accountability
- Promote digital adaptation
- Develop synergies with city stakeholders and enhance participation
- Support integrated planning and strengthen municipal leadership
- Raise awareness and appreciation for the City and its services
- Maximize the dynamic of the Athenian neighborhood
- Combine essential services with dynamic urban development
- Invest in local capacity building
- Promote equitable, cohesive and supportive communities
- Protect and maintain critical infrastructure
- Enhance city's identity
- Promote local culture
- Provide incentives for economic development
- Promote sustainable management and development
- Support and enhance natural environment
- Promote residents' well-being and ameliorate their quality of life
- Maximize urban assets

Action Owners: City of Athens

Partners: Neighborhood Cities, Ministry of Environment and Energy, C40

Legislative authority:

Funding Sources: Municipal funds, structural funds

Timeframe: Short-term (Ongoing)

SDGs goals

## A.1 Climate change adaptation action plan

### A.1.1 Enhance green infrastructure in the city

The City of Athens targets investment into green infrastructure and nature-based solutions that could improve the city's microclimate. These solutions could also limit the urban heat island effect and improve air quality, and reduce the impacts of flooding. To achieve these goals, the actions to be taken are the following:

- Provide proper maintenance of the existing green areas so as to increase their environmental impact, and implement new planting in existing green areas that belong to the municipality of Athens. (Actions 5.1.1-5.1.2, CAAP)
- Enhance green infrastructure in the regeneration of public spaces. (Action 5.1.3, CAAP)
- Design and create "Green Corridors" both within the municipality of Athens and on a metropolitan scale, in order to improve air circulation and walkability. (Actions 5.1.4-5.1.5, CAAP)
- Undertake the necessary regulatory procedures for establishing new green public spaces in the city. (Actions 5.1.6, CAAP)
- Design and develop pocket parks, parklets, green roofs and vertical gardens in public, private and abandoned properties. (Actions 5.1.7-5.1.10, CAAP)
- Enhance small urban framing boxes in school playground and develop urban farming in parks, public and private lots, roof gardens etc., and promote community farming in a municipal green area. (Actions 5.1.11, CAAP)
- Establish sustainable water management and organic (green byproducts) waste management in all urban green areas. (Actions 5.1.12-5.1.13, CAAP)
- Design and create "Blue Corridors" and enhance other water elements in the city, such as maintaining as well as creating new water fountains. (Actions 5.1.14-5.1.15, CAAP)

**Action Owner:** City of Athens (Department of Green and Parks with ORS)

**Partners:** C40, platform partners, synAthina, city of Vienna (MoU), universities, NGOs, CSOs, private sector

**Funding sources:** Municipal funds, NSRF, private investments and Donations

**Time frame:** Short/Medium-term

### A.1.2 Built environment

Athens is a very densely and anarchically built city with an aging building stock, high energy demands and low albedo surfaces. The use of sustainable materials and bioclimatic design (cool materials, shading structures, increase of vegetation) can have positive effects on climate change and help protect the city's population. The adaptation measures that are suggested cover a wide range of actions.

The actions to be taken are the following:

- Regulate new pedestrian streets. (Actions 5.2.1, CAAP)
- Establish a regulatory framework for the use of cool and sustainable materials in all municipal public works. (Actions 5.2.2, CAAP)
- Design and develop shading and natural cooling solutions in urban planning and street furniture. (Actions 5.2.3-5.2.4, CAAP)
- Record and monitor existing underground tunnels and develop routes and shelters for the case of future extreme heat waves or other crises. (Actions 5.2.5, CAAP)

**Action Owner:** City of Athens (Relevant departments and ORS)

**Partners:** C40, platform partners, universities, private sector

**Funding sources:** Municipal funds, NSRF, private investments and Donations

**Timeframe:** Short/Medium-term

## A.1 Climate change adaptation action plan

### A.1.3 Public health protection

The municipality is responsible for making available data and services, to all residents, that contribute to the protection and the reduction of the health risks related to high temperatures. The Municipality, through strategic partnerships and the use of new technologies, can ensure the comprehensive dissemination of relevant information. The city also actively pursues better coordination with the relevant government authorities for implementing prevention and protection measures for the general population.

The actions to be taken are the following:

- Expand the "cool centers" network so that citizens can protect themselves during high temperatures. (Actions 5.3.1, CAAP)
- Establish public water fountains so that the public can have access to drinkable water. (Actions 5.3.2, CAAP)
- Protect air quality through establishing regulatory measures for traffic management. (Actions 5.1.3, CAAP)

Improve crisis preparedness of municipal administration services. (Actions 5.3.4, CAAP)

**Action Owner:** City of Athens (Relevant departments and ORS)

**Partners:** universities, NOA, General Secretariat of Civil Protection

**Funding sources:** Own funds

**Time frame:** Short/Medium-term

### A.1.4 Public information and awareness campaign #coolathens

The involvement and participation of citizens and professionals in the actions outlined in this strategy are crucial to the success of the endeavor. Tackling climate change can only be achieved by joining forces with the people.

The actions to be taken are the following:

- Promote publicly available personalized information linking high temperatures to health risks through the Treasure Phone and Web Application (NOA) as well as NFC tags and guide high risk populations to an enhanced network of municipal "Cool Centers". (Actions 5.4.1, CAAP)
- Link all heat related data sources (EU projects, Central Government institutional info, NOA and other research centers data) to the Municipal Portal. (Actions 5.4.2, CAAP)
- Establish a series of information and awareness raising campaigns and activities of the general public. (Actions 5.4.3, CAAP)
- Engage the private sector in all the above activities the private. (Actions 5.4.4, CAAP)

**Action Owner:** City of Athens (Mayor's Office, relevant departments and ORS)

**Partners:** universities, research centers, Central Government, private sector, NGOs and CSOs

**Funding sources:** Municipal funds, private Donations

**Time frame:** Short-term

The Athens Climate Change Adaptation Plan consists of 29 actions aiming to improve Athens' capacity to respond to rising urban temperatures, which are organized under these 4 pillars

## E.2

## Energy poverty mitigation roadmap

**Description:**

Energy poverty tends to become one of the biggest social problems in Europe. Greece is no exception. According to a recent study almost 25% of Athenian households suffer from energy poverty due to the economic crisis and are unable to cover their basic domestic needs. These households are unable to afford any heating during the winter and live in indoor temperatures that do not exceed 6 to 7 degrees Celsius in the cold winter months.

The City of Athens will implement measures for energy poverty elimination at city level and will develop programs to alleviate the most vulnerable populations suffering from energy poverty.

**Goal E****Establish sustainable and equitable energy system****Resilience Value:**

- Support data-driven policy making
- Enhance and promote communication channels with the citizens
- Support transparency and accountability
- Develop synergies with city stakeholders and enhance participation
- Support integrated planning and strengthen municipal leadership
- Raise awareness and appreciation for the City and its services
- Invest in local capacity building
- Promote equitable, cohesive and supportive communities
- Protect and maintain critical infrastructure
- Provide incentives for economic development
- Promote sustainable management and development
- Support and enhance natural environment
- Promote residents' well-being and ameliorate their quality of life

**Action Owners:** City of Athens (ORS)

**Partners:** CRES and relevant municipal departments

**Legislative authority:**

**Funding Sources:** CRES, European Funds, and Municipal funds

**Timeframe:** Medium-term

**SDGs goals:**

## E.2 Energy poverty mitigation roadmap

Green city

**E.2.1 Energy poverty observatory**

The City of Athens will establish in cooperation with the Center for Renewable Energy Sources and Saving (CRES) an energy poverty Observatory that would be responsible for monitoring households that suffers from energy poverty and will deliver solutions for energy efficiency. It would also try to link energy demands to renewable energy production.

**Action Owner:** City of Athens (ORS) and CRES

**Partners:** Athenian Gas; Metropolitan Agency for Natural Gas, CRES, Heinrich Boll Foundation, Social Cooperative "Wind of Renewal," NGOs and Department of Social Services

**Funding sources:** CRES, European Funding and Municipal funds

**Timeframe:** Short-term

**E.2.2 Energy saving awareness raising campaign and capacity building**

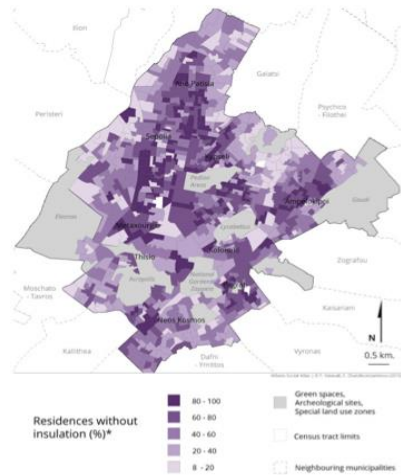

The City of Athens will consider a joint venture of public and private sector for planning and implementing a long-term campaign to provide information and build capacity among citizens regarding energy savings (energy inspectors, website, phone center, financial instruments consultation, etc.).

**Action Owner:** City of Athens (ORS, Mayor's Office)

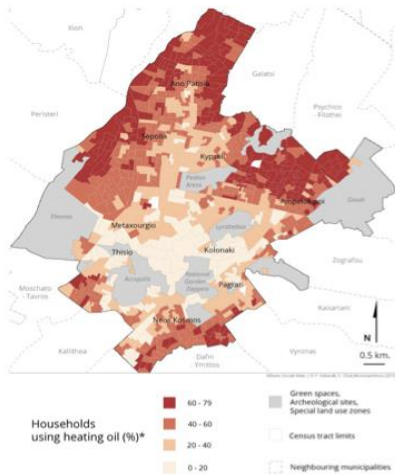

**Partners:** ADDMA, Athenian Gas; Metropolitan Agency for Natural Gas, Heinrich Boll Foundation, Social Cooperative "Wind of Renewal," NGOs and private sector.

**Funding sources:** Municipal funds and private donors

**Timeframe:** Medium-term

Source: VataliF., Chatzikonstantinou E.,(eds) (2015) Athens Social Atlas. Mapping energy poverty in Athens during the crisis.(<http://www.athenssocialatlas.gr/en/article/energy-poverty/>)

Source: VataliF., Chatzikonstantinou E.,(eds) (2015) Athens Social Atlas. Mapping energy poverty in Athens during the crisis.(<http://www.athenssocialatlas.gr/en/article/energy-poverty/>)

## E.2 Energy poverty mitigation roadmap

**E.2.3 Building renovation passport**

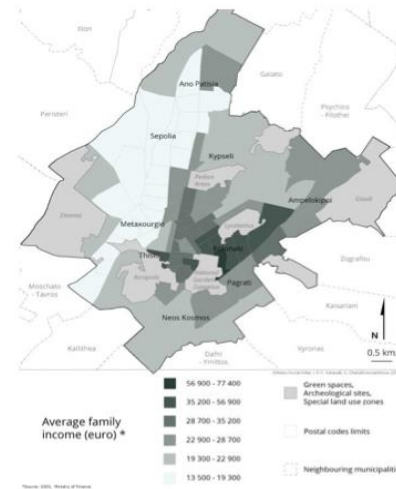

A Building Renovation Passport (BRP) is –a document outlining a long-term (up to 15 or 20 years) step-by-step renovation roadmap for a specific building, resulting from an on-site energy audit guided by specific quality criteria and indicators, in dialogue with the renters and building owners. The City of Athens in collaboration with CRES will develop a library with BRPs from its buildings in order to record the energy demands and the measures applied in long-term for energy savings so that in future an energy roadmap could be developed.

**Action Owner:** City of Athens (ORS) and CRES

**Partners:** CRES, Athenian Gas; Metropolitan Agency for Natural Gas, Heinrich Boll Foundation, Social Cooperative "Wind of Renewal," and Department of Public Works

**Funding sources:** CRES, European Funding and Municipal funds

**Timeframe:** Medium-term

# 2 BILLION PEOPLE WORLDWIDE EXPERIENCE ENERGY POVERTY.\*

\*INTERNATIONAL ENERGY AGENCY (IEA)

DATA FROM THE EUROPEAN UNION ENERGY POVERTY OBSERVATORY INDICATES THAT THE ESTIMATED NUMBER OF ENERGY-POOR CITIZENS IN THE EUROPEAN UNION VARIES BETWEEN 50 AND 125 MILLION PEOPLE.

# Climate Risk Information

A 2019 analysis of **571** European cities by the Newcastle University Polytechnic School ranked **Athens as the European city facing the single greatest impact from heat waves.**

---

## Heat

---

In December 2018, **Moody's** released a report evaluating the credit risks to 30 European cities posed by climate change. **Athens ranked highest in terms of exposure to heat and drought and among the top three cities at risk from peri-urban forest fires.**

Moody's stated that the increased intensity and frequency of extreme heat waves means **"Athens' credit strength will be sensitive to climate change... [particularly] if heat waves were to depress tourism activity [and] negatively impact the city's overall economic strength."**

# Climate Risk Information

Currently the number of days with temperatures **above 36°C** are **between 15 and 25 per year**.

During the next decades, around the middle of the century, the **number of heatwave days is expected double, we expect 15 to 20 days extra** each year while **rainfall is expected to decrease by 12%**.

---

## Heat

---

Average summer temperatures in Athens are expected to increase:

- **by 2°C between 2021 - 2050**
- **up to 4°C between 2071 and 2100**

As **heat rises** together with the **frequency and duration of heat waves**, the **Athenian Urban Heat Island effects**, already exhibiting severe temperature differences between the city center and its suburbs, **will also intensify**.

# Climate Risk Information

---

## Heat

---

For every 1°C temperature increase in Athens

- **5.2%** increase in mortality rates for the period 2000-2012 (for Tdaily,MAX>31.5°C)
- **6%** increase in smog for Tdaily,MAX>22°C (correlated to asthma and respiratory illnesses)
- **10%** drop in sales at cities (for Athens at Tdaily,MAX>36°C)
- **4.1%** increase in the use of electricity in the city

- Central Athens can be **5°C hotter during the night** and up to **10°C hotter during the day**, than outlying suburban areas due to the Urban Heat Island Effect.
- **~200 deaths per year** are related to high temperatures
- **Electricity use increases by 4.1% per degree of temperature increase**, in a city with 24% energy poverty
- **Commercial activity declines** as temperatures climb over 34 Celsius
- **Insects, fungi** and related illnesses are becoming more prominent infecting humans, flora and fauna
- Prolonged heat waves aggravates the **risk of peri-urban fires** which destroy ecosystems and their cooling services

# Climate Risk Information

**The summer of 2021**, Greece experienced the worst heatwave in three decades. The first heatwave occurred in June, and then temperatures peaked from the last week of July until the middle of August.

**47C** in early August in Northern Greece and **45C in Athens**  
Between August 3<sup>rd</sup> and Sept 3<sup>rd</sup> **140+ wildfires burned 125.000 hectares burned.**

Greece recorded over 2,300 excess deaths — excluding registered deaths from coronavirus — between late July and mid-August compared with the last five years.

Around 1,400 excess deaths were in the first week of August alone.

## GREECE

Weekly excess deaths in 2021, excluding deaths attributed to COVID, compared to the 2016-2020 average.

A jump in the number of deaths registered, coincides with the peaking temperatures in June and August, if compared with the average of the last five years, according to data collated by Eurostat.

death rates.

# EXPOSURE TO EXTREME HEAT CAN CAUSE

LOSS OF CONSCIOUSNESS  
DEHYDRATION  
HEAT EXHAUSTION  
HEAT STROKE  
DEATH

FROM 1998-2017

**166,000+** PEOPLE DIED DUE TO  
HEATWAVES GLOBALLY

AND EVEN THESE NUMBERS ARE LIKELY UNDERESTIMATED AS DEATHS FROM HEATWAVES ARE OFTEN ATTRIBUTED TO OTHER ILLNESSES MADE WORSE BY HEAT (LIKE CARDIOVASCULAR DISEASE).

# OUTSIDE WORKERS MAY BE AT INCREASED RISK OF HEAT-RELATED ILLNESS AND DEATH.

AS THE NUMBER OF HOURS EXPOSED TO  
HEAT INCREASES, SO DOES THE LIKELIHOOD  
OF HEAT-HEALTH IMPACTS.

- **Maintenance and support of existing Urban Nature**

# Cooling the City

URBAN FORESTS ARE BEING PLANTED AROUND THE WORLD TO COMBAT THE URBAN HEAT ISLAND EFFECT IN CITIES.

LOUISVILLE, KENTUCKY HAS THE FASTEST GROWING URBAN HEAT ISLAND EFFECT IN THE U.S. THE CITY PLANS TO INCREASE TREE CANOPY TO 45%.

PARIS, FRANCE HAS ALREADY ADDED 70 HECTARES OF GREEN SPACE OPEN TO THE PUBLIC, AS PART OF ITS GREENING PROGRAM.

# CITY EXAMPLES

**Medellín, Colombia:** 36 green corridors with surrounding areas seeing temperature reductions of up to 4°C.

**Paris, France:** Paris is using the Seine River water to provide “free district cooling,” is issuing permits for people to green public spaces, and is co-designing its “school-yards oases”

**Melbourne, Australia:** has an Urban Forest and a Nature in the City Strategy supporting and creating healthy diverse ecosystems

**Seoul, South Korea:** Cheonggyecheon stream 5.8 km of water corridor has decreased temperature 3.3°C to 5.9°C compared to a parallel road a few blocks away.

**New York City, USA:** The city established the “buddy system” and installed 74,000 air-conditioners to provide lifesaving in-home cooling for low-income seniors

# IF WE WORK TOGETHER AS A GLOBAL COMMUNITY, WE CAN HELP PROTECT PEOPLE FROM EXTREME HEAT.

EXTREME HEAT RESILIENCE ALLIANCE THIS IS EHRA'S APPROACH:
